ADVERTISEMENT.

VE the Subscribers, inhabitants of Kentucky, and well acquainted with the country from its first fettlement; at the request of the author of this book, have carefully revised it, and recommend it to the Public as an exceeding good performance, containing as accurate a description of our country as we think can possibly be given : much preferable to any in our knowledge extant; and think it will be of great utility to the Public. Witness our hands this 12th day of May, Anno Domini 1784.

American Journeys-www.americanjourneys.org

DANIEL BOON, LEVI TODD, JAMES HARROD.

PREFACE.

THE generality of those geographers, who have attempted a map, or description of America, seem either to have had no knowledge of Kentucky or to have neglected it, although a place of infinite importance: and the rest have proceeded so erroneously, that they have left the world as much in darkness as before.

When I visited Kentucky, I found it so far to exceed my expectations, although great, that I concluded it was a pity, that the world had not adequate information of it. I conceived that a proper description of it was an object highly interesting to the United States; and therefore, incredible as it may appear to some, I must declare, that this performance is not published from lucrative motives, but solely to inform the world of the happy climate, and plentiful soil of this favoured region. And I imagine the reader will believe me the more easily when I inform him, that I am not an inhabitant of Kentucky, but having been there some time, by my acquaintance in

it,

American Journeys-www.americanjourneys.org

T

(274)

it, am sufficiently able to publish the truth, and from principle, have cautiously endeavoured to avoid every species of fallebood. The consciousness of this encourages me to bope for the public candour, where errors may possibly be found. The three gentlemen honouring this work with their recommendation, Col. Boon, Col. Todd, and Col. Harrod, were among the first settlers, and perfestly well acquainted with the country. To them I acknowledge myself much indebted for their friendly affistance in this work, which they cheerfully contributed, with an difinterested view of being serviceable to the public. My thanks are more especially due to Col. Boon, who was earlier acquainted with the subject of this performance than any other now living, as appears by the account of his adventures, which I effeemed curious and interesting, and therefore have published them from his own mouth. (Much advantage may possibly arise to the poffeffor of this book, as those who wish to travel in Kentuky will undoubtedly find it a Complete Guide. To fuch I affirm, that there is nothing mentioned or described but what they will find true. Conscious that it would be of general utility, I have omitted nothing, and been exceeding particular in every part. That it may have the defired effect, is the fincere wish of

JOHN FILSON.

DISCOVERY, PURCHASE,

AND

SETTLEMENT

KENTUCKY.

OF

THE first whiteman we have certain accounts of, who difcovered this province, was one James M'Bride, who, in company with fome others, in in the year 1754, passing down the Ohio in canoes, landed at the mouth of Kentucky river, and there marked a tree with the first letters of his name, and the date, which remain to this day. These men reconnoitred the country, and returned home with the pleasing news of their dif-

T 2

covery

(276)

covery of the beft tract of land in North America, and probably in the world. From this period it remained concealed till about the year 1767, when one John Finley, and fome others, trading with the Indians, fortunately travelled over the fertile region, now called Kentucky, then but known to the Indians, by the name of the Dark and Bloody Ground, and fometimes the Middle Ground. This country greatly engaged Mr. Finley's attention. Some time after, difputes arifing between the Indians and traders, he was obliged to decamp; and returned to his place of refidence in North Carolina, where he communicated his difcovery to Col. Daniel Boon, and a few more, who conceiving it to be an intereffing object, agreed in the year 1769 to undertake a journey in order to explore it. After a long fatiguing march, over a mountainous wildernefs, in a weftward direction, they at length arrived upon its borders; and from the top of an eminence, with joy and wonder, defcried the beautiful landscape of Kentucky. Here they encamped, and fome went to hunt provisions, which were readily procured, there being plenty of game,

(277)

game, while Col. Boon and John Finley made a tour through the country, which they found far exceeding their expectations, and returning to camp, informed their companions of their difcoveries: but in fpite of this promifing beginning, this company, meeting with nothing but hardfhips and adverfity, grew exceedingly difheartened, and was plundered, difperfed, and killed by the Indians, except Col. Boon, who continued an inhabitant of the wilderness until the year 1771, when he returned home.

About this time Kentucky had drawn the attention of feveral gentlemen. Doctor Walker of Virginia, with a number more, made a tour weftward for difcoveries, endeavouring to find the Ohioriver; and afterwards he and General Lewis, at Fort Stanwix, purchafed from the Five Nations of Indians the lands laying on the north fide of Kentucky. Col. Donaldfon, of Virginia, being employed by the State to run a line from fix miles above the Long Island, on Holfton, to the mouth of the great Kenhaway, and finding thereby that an extensive tract of excellent country would be cut off to the Indians, was folicited, by the

T₃

(278)

the inhabitants of Clinch and Holfton, to purchafe the lands lying on the north fide of Kentucky river from the Five Nations. This purchafe he completed for five hundred pounds, fpecie. It was then agreed, to fix a boundary line, running from the Long Ifland on Holfton to the head of Kentucky river: thence down the fame to the mouth, thence up the Ohio, to the mouth of Great Kenhaway; but this valuable purchafe the State refufed to confirm.

Richard Henderfon, of North-Carolina, being informed of this country by Col. Boon, he, and fome other gentlemen held a treaty with the Cherokee Indians at Wataga, in March 1775, and then purchafed from them the lands lying on the fouth fide of Kentucky river, for goods, at valuable rates, to the amount of fix thoufand pounds, fpecie.

Soon after this purchafe, the State of Virginia took the alarm, agreed to pay the money Col. Donaldfon had contracted for, and then difputed Mr. Henderfon's right of purchafe, as a private gentlemen of another flate, in behalf of himfelf: However for his eminent fervices to this coun-

try,

(279)

try, and for having been inftrumental in making fo valuable an acquifition to Virginia, that flate waspleafed to reward him with a tract of land, at the mouth of Green River, to the amount of two hundred thousand acres; and the state of North-Carolina gave him the like quantity in Powel's Valley. This region was formerly claimed by various tribes of Indians; whose title, if they had any, originated in fuch a manner, as to render it doubtful which ought to poffels it: Hence this fertile fpot became an object of contention, a theatre of war, from which it was properly denominated the Bloody Grounds. Their contentions not being likely to decide the right to any particular tribe, as foon as Mr. Henderfon and his friends proposed to purchase, the Indians agreed to fell; and notwithstanding the valuable confideration they received, have continued ever fince troublefome neighbours to the new fettlers.

SITUATION and BOUNDARIES.

KENTUCKY is fituated, in its central part, near the latitude of 38° north, and 85° weft longi-T 4 tude,

(280)

tude, and lying within the fifth climate, its longeft day is 14 hours 40 minutes. It is bounded on the north by great Sandy-creek; by the Ohio on the N. W. by North-Carolina on the fouth; and by the Cumberland mountain on the eaft, being upwards of 250 miles in length, and two hundred in breadth; and is at prefent divided into three counties, Lincoln, Fayette and Jefferfon; of which Fayette and Jefferfon are bounded by the Ohio, and the river Kentucky feparates Fayette on its north fide from the other two. There are at prefent eight towns laid off, and building, and more are propofed.

Louifville, at the Falls of Ohio, and Beardstown, are in Jefferfon county; Harrodfburg, Danville, and Boons-burrow, in Lincoln county; Lexington, Lees-town, and Greenville, in Fayette county; the two laft being on Kentucky river. At thefe and many other places, on this and other rivers, infpecting-houfes are eftablished for Tobacco, which may be cultivated to great advantage, although not altogether the staple commodity of the country.

RIVERS.

(281)

RIVERS.

THE beautiful river Ohio, bounds Kentucky in its whole length, being a mile and fometimes lefs in breadth, and is fufficient to carry boats of great burthen. Its general course is fouth 60 degrees weft; and in its courfe it receives numbers of large and fmall rivers, which pay tribute to its glory. The only difadvantage this fine river has, is a rapid, one mile and half long, and one mile and a quarter broad, called the Falls of Ohio. In this place the river runs over a rocky bottom, and the defcent is fo gradual, that the fall does not probably in the whole exceed twenty In fome places we may obferve it to fall a feet. few feet. When the ftream is low, empty boats only can pass and repass this rapid; their lading must be transported by land; but when high, boats of any burthen may pass in fafety. Excepting this place, there is not a finer river in the world for navigation by boats. Befides this, Kentucky is watered by eight fmaller rivers, and many large and fmall creeks.

Licking River heading in the mountains with Cumber-

(282)

Cumberland River, and the North Branch of Kentucky runs in a N. W. direction for upwards of a hundred miles, collecting its filver ftreams from many branches, and is about one hundred yards broad at its mouth.

Red River* heads and interlocks with the main branch of Licking, and flows in a S. W. coarfe into Kentucky River, being about fixty miles long, and fixty yards wide at its mouth.

The Kentucky River rifes, with three heads, from a mountainous part of the country. Its northern branch interlocks with Cumberland; runs half way in a weftern direction, and the other half N. wefterly. It is amazingly crooked upwards of two hundred miles in length, and about one hundred and fifty yards broad.

Elkhorn is a fmall river which empties itfelf into Kentucky in a N. W. by W. courfe; is about fifty miles long, and fifty yards broad at the mouth.

Dick's River joins the Kentucky in a N. Weft direction; is about forty-five miles long, and fortyfive yards wide at its mouth. This river curiouf-

ly

* This river is a principal branch of the Kantucky.

(283)

ly heads and interlocks its branches with Salt River, Green River, and the waters of Rockcaftle River.—Salt River rifes at four different places near each other. The windings of this river are curious, rolling its ftreams round a fpacious tract of fine land, and uniting almost fifteen miles before they approach the Ohio, and twenty miles below the Falls. It is amazingly crooked, runs a western course near ninety miles.

Green River interlocking with the heads of Dick's River, as mentioned above, is alfo amazingly crooked, keeps a weftern courfe for upwards of one hundred and fifty miles, and is about eighty yards wide at its mouth, which is about two hundred and twenty miles below the Falls.

Cumberland River, interlocks with the northern branch of Kentucky, as aforefaid, and rolling round the other arms of Kentucky among the mountains, in a fouthern courfe for one hundred miles; then in a fouth weftern courfe for above one hundred miles; then in a fouthern and S. weftern courfe for about two hundred and fifty more, finds the Ohio, four hundred and thirteen miles below the Falls. At the fettlements

(284)

ments it is two hundred yards broad; and at its mouth three hundred, having passed through North Carolina in about half its course.

The Great Kenhaway, or New River, rifes in North Carolina, runs a northern, and N. W. courfe for upwards of four hundred miles, and finds the Ohio four hundred miles above the Falls. It is about five hundred yards wide at These two rivers are just mentioned, its mouth. being beyond our limits. They run contrary courfes, are exceeding large, and it is worth notice, that Clinch, Holftein, Nolachucky, and French-Broad rivers, take their rife between thefe two, or rather weftward of New River, fome of them rifing and interlocking with it; and when they meet, form what is called the Tenafee River, which runs a weftern courfe, and finds the Ohio twelve miles below Cumberland River. It is very large, and has fpacious tracks of fine land.

Thefe rivers are navigable for boats almost to their fources, without rapids, for the greatest part of the year. This country is generally level, and abounding with limestone, which usually lies about fix feet deep, except in hollows, where streams

3

(285)

ftreams run, where we find the rock in the bottom of the channel.

The fprings and ftreams leffen in June, and continue low, hindering navigation, until November, when the autumnal rains foon prepare the rivers for boats, and replenish the whole country with water; but although the ftreams decrease, yet there is always fufficient for domestic uses. There are many fine springs, that never fail; every farmer has a good one at least; and excellent wells may easily be dug.

NATURE of the SOIL.

THE country, in fome parts, is nearly level; in others not fo much fo; in others again hilly, but moderately, and in fuch places there is most water. The levels are not like a carpet, but intersperfed with small risings and declivities, which form a beautiful prospect. A great part of the foil is amazingly fertile; fome not fo good, and fome poor. The inhabitants distinguish its quality by first, fecond, and third rate lands; and

(286)

and fcarcely any fuch thing as a marsh or fwamp is to be found. There is a ridge, where Kentucky rifes, nearly of the fize of a mountain.

All the land below the Great Kenhaway until we come near the waters of Licking Riveris, broken, hilly, and generally poor; except in fome valleys, and on Little and Great Sandy creeks, where there is fome first rate land, but mostly fecond and third rate. It is faid, that near this water is found a pure falt rock. Upon the north branch of Licking, we find a great body of first This ftream runs nearly parallel to rate land. the Ohio for a confiderable diftance, and is about feven miles from the mouth of Limestone Creek, where is a fine harbour for boats coming down the Ohio, and now a common landing. It is fixty-five miles from Lexington, to which there is a large waggon road. The main branch of Licking, is about twenty-two miles from Limestone. On this stream we find some first, but mostly fecond and third rate lands, and towards its head fomething hilly. There we find the Blue Licks, two fine falt fprings, where great plenty of falt may be made. Round thefe licks, the

(287)

the foil is poor for fome diffance, being much impregnated with falt.

The fouthern branch of Licking, and all its other arms, fpread through a great body of firft, and fome fecond rate land, where there is abundance of cane, and fome falt licks, and fprings. On these feveral branches of Licking, are good mill-feats, and navigation to the Ohio, from the fork down to its mouth. The land is hilly, and generally poor, yet along the ftreams and in valleys we find fome excellent land.

The Elkhorn lands are much efteemed, being fituated in a bend of Kentucky River, of great extent, in which this little river, or rather large creek, rifes. Here we find mostly first rate land, and near the Kentucky River fecond and third rate. This great tract is beautifully fituated, covered with cane, wild rye, and clover and many of the streams afford fine mill feats.

The lands below the mouth of Elkhorn, up Eagle Creek, and towards the Ohio, are hilly and poor, except those contained in a great bend of the Ohio opposite Great Miami, cut off by the Big-bone and Bank-lick creeks, interlock-

ing,

(288)

ing, and running feparate courfes. Here we find a great deal of good land, but fomething hilly.

On Kentucky River we find many fertile valleys, or bottoms along the river, efpecially towards its rife. There is good land also on Red River, but towards the heads of this, and Kentucky the foil is broken; but even here, we find in valleys, and along ftreams a great deal of fruitful land. Generally the foil within a mile or two of Kentucky River is of the third and fourth rates; from about that diftance, as we leave it on either fid; we approach good lands. The country through which it winds its courfe, for the most part, may be confidered as level to its banks, or rather precipices; from the brow of which, we behold the river, three and fometimes four hundred feet deep, like a great canal. For a more particular account of this, we refer the reader to where we treat of the curiofities of Kentucky.

Dick's River runs through a great body of first rate land, abounding every where with cane, and affords many excellent mill feats. Many mills are already built on this stream, and will feasons.

289) (

have a plentiful fupply of water in the dryeft feafons. The banks of this river, near its mouth, are fimilar to the banks of Kentucky. The feveral streams and branches of Salt River afford excellent mill feats. These roll themselves through a great tract of excellent land, but the country from the junction of these waters, and fome miles above towards the Ohio, which may be about twenty-five miles, is level and poor, and has abundance of ponds. For a confiderable distance from the head of this river, the land is of the first quality, well situated, and abounds with fine cane. Upon this and Dick's River, the inhabitants are chiefly fettled, it being the fafest part of the country from the incursions of the Indians.

Green River affords excellent mill feats, and This is allowed to be the a constant stream. best watered part of Kentucky. On its banks we find many fine bottoms, some first rate, but mostly second and third rate lands; and at some diftance, many knobs, ridges, and broken poor land. Below a creek, called Sinking Creek, on this river, within fifty miles of Ohio, towards U

Salt

(290)

Salt River, a great territory begins, called Green River Barrons, extending to the Ohio. It has no timber, and little water, but affords excellent pasturage for cattle. On some parts of this river, we find abundance of cane, fome falt licks, and fulphureous and bituminous fprings. South of Green River in the lands referved for the continental, and state troops of Virginia, an exceeding valuable lead mine has lately been difcovered. Iron ore is found on Rough Creek, a Aream running into this river. That part of Cumberland River which is in the Kentucky country, traverse a hilly poor land, though in fome parts we find good foil along its fides. The other rivers I mentioned (viz. Great Kenhaway and Tenafee are not in the Kentucky country, and therefore do not come properly within my plan.

The reader by cafting his eye upon the map, and viewing round the heads of Licking, from the Ohio, and round the heads of Kentucky, Dick's River, and down Green River to the Ohio, may view, in that great compass of above one hundred miles square, the most extraordinary country upon which the fun ever shone.

The

(291)

The Ohio River, the great refervoir of all the numerous rivers that flow into it from both fides, has many fine valleys along its fides; and we obferve that oppofite to each of them there is a hill; thefe hills and bottoms changing fides alternately. It only remains under this head to inform the reader that there is a great body of first rate land near the Falls, or Rapids, called Bare-grafs; and it will be fufficient just to mention that the country on the N. W. fide of the Ohio, is allowed by all travellers to be a most fertile, level country, and well watered.

AIR AND CLIMATE.

THIS country is more temperate and healthy than the other fettled parts of America. In Summer it wants the fandy heats which Virginia and Carolina experience, and receives a fine air from its rivers. In Winter, which at most only lasts three months, commonly two, and is but feldom fevere, the people are fase in bad houses; and the beasts have a good supply without fodder.

The

American Journeys-www.americanjourneys.org

U 2

292)

The Winter begins about Christmas, and ends about the first of March, at farthest does not exceed the middle of that month. Snow feldom falls deep or lies long. The weft winds often bring ftorms, and the east winds clear the fky; but there is no fleady rule of weather in that refpect, as in the northern states. The west winds are fometimes cold and nitrous. The Ohio running in that direction, and there being mountains on that quarter, the westerly winds by fweeping along their tops, in the cold regions of the air, and over a long tract of frozen water, collect cold in their courfe, and convey it over the Kentucky country; but the weather is not fo intenfely fevere as thefe winds bring with them in Pennfylvania. The air and feafons depend very much on the winds, as to heat and cold, dryness and moisture.

SOIL AND PRODUCE.

THE foil of Kentucky is of a loofe, deep black mould, without fand, in the first rate lands about

(293)

about two or three feet deep, and exceeding luxurious in all its productions. In fome places the mould inclines to brown. In fome the wood, as the natural confequence of too rich a foil, is of little value, appearing like dead timber and large ftumps in a field lately cleared. These parts are not confiderable. The country in general may be confidered as well timbered, producing large trees of many kinds, and to be exceeded by no country in variety. Those which are peculiar to Kentucky are the fugar-tree, which grows in all parts in great plenty, and furnishes every family with plenty of excellent fugar. The honey-locuft is curioufly furrounded with large thorny fpikes bearing broad and long pods in form of peas, has a fweet tafte, and makes excellent beer.

The-coffee-tree greatly refembles the black oak, grows large, and alfo bears a pod, in which is enclofed coffee. The papwa-tree does not grow to a great fize, is a foft wood, bears a fine fruit, much like a cucumber in fhape and fize, and taftes fweet. The cucumber-tree is fmall and foft, with remarkable leaves, bears a fruit much refembling that from which it is named.

Black

American Journeys-www.americanjourneys.org

 U_3

、 294)

Black mulberry-trees are in abundance. The wild cherry-tree is here frequent, of large fize, and fupplies the inhabitants with boards for all their buildings. Here alfo is the buck-eye, an exceeding foft wood, bearing a remarkable black fruit, and fome other kinds of trees not common elfewhere. Here is great plenty of fine cane, on which the cattle feed, and grow fat. This plant in general grows from three to twelve feet high, of a hard fubilance, with joints at eight or ten inches distance along the stalk, from which proceed leaves refembling those of the willow. There are many cane brakes fo thick and tall that it is difficult to pass through them. Where no cane grows there is abundance of wild-rye, clover. and buffalo-grafs, covering vaft tracts of country, and affording excellent food for cattle. The fields are covered with abundance of wild herbage not common to other countries. The Shawanefe fallad, wild lettuce, and peppergrafs, and many more, as yet unknown to the inhabitants, but which, no doubt, have excellent virtues. Here are feen the finest crown-imperial in the world, the cardinal flower, fo much extolled

(295)

tolled for its scarlet colour; and all the year, excepting the Winter months, the plains and valleys are adorned with variety of flowers of the most admirable beauty. Here is also found the tulip-bearing laurel-tree, or magnolia, which has an exquisite smell, and continues to blossom and feed for feveral months together.

This country is richeft on the higher lands, exceeding the fineft low grounds in the fettled parts of the continent. When cultivated it produces in common fifty and fixty bushels per acre; and I have heard it affirmed by credible perfons, that above one hundred bushels of good corn were produced from an acre in one feafon. The first rate land is too rich for wheat till it has been reduced by four or five years cultivation.

Col. Harrod, a gentleman of veracity in Kentucky, has lately experienced the production of fmall grain, and affirms, that he had thirtyfive bushels of wheat, and fifty bushels of rye per acre.

I think, in common, the land will produce about thirty bushels of wheat and rye, upon a moderate computation, per acre; and this is the general U4

(296)

general opinion of the inhabitants. We may fuppofe that barley and oats will increafe abundantly; as yet they have not been fufficiently tried. The foil is very favourable to flax and hemp, turnips, potatoes, and cotton, which grow in abundance; and the fecond, third, and fourth rate lands are as proper for fmall grain. Thefe accounts of fuch amazing fertility may, to fome, appear incredible, but are certainly true. Every hufbandman may have a good garden, or meadow, without water or manure, where he pleafes. The foil, which is not of a thirfty nature, is commonly well fupplied with plentiful fhowers.

Iron ore and lead are found in abundance, but we do not hear of any filver or gold mine as yet difcovered.

The weifern waters produce plenty of fifh and fowl. The fifh, common to the waters of the Ohio, are the buffalo-fifh, of a large fize, and the cat-fifh, fometimes exceeding one hundred weight. Trout have been taken in Kentucky weighing thirty weight. The mullet, rock, perch, gar-fifh, and cel, are here in plenty. Suckers, fun-fifh, and other hook-fifh, are abundant; but

no

(297)

no fhad, or herrings. We may fuppofe with a degree of certainty, that there are large fubterraneous aqueducts ftored with fifh, from whence fine fprings arife in many parts, producing fine hook-fifh in variety. On thefe waters, and efpecially on the Ohio, the geefe and ducks are amazingly numerous.

The land fowls are turkeys, which are very frequent, pheafants and partridges *. The parroquet, a bird every way refembling a parrot, but much fmaller; the ivory-bill woodcock, of a whitifh colour, with a white plume, flies fcreaming exceeding fharp. It is afferted, that the bill of this bird is pure ivory, a circumftance very fingular in the plumy tribe. The great owl refembles its fpecies in other parts, but is remarkably different in its vociferation, fometimes making a ftrange, furprifing noife, like a man in the moft extreme danger and difficulty.

Serpents are not numerous, and are fuch as are to be found in other parts of the continent, except the bull, the horned, and the mockafon

fnakes.

^{*} What is called a partridge by most people in America is a quail, and what is called a pheafant is a species of groufe.

(298)

fnakes. Swamps are rare, and confequently frogs and other reptiles, common to fuch places. There are no fwarms of bees, except fuch as have been introduced by the prefent inhabitants.

QUADRUPEDS.

AMONG the native animals are the urus, or zorax*, defcribed by Cefar, which we call a buffalo, much refembling a large bull, of a great fize, with a large head, thick, fhort, crooked horns, and broader in his forepart than behind. Upon his fhoulder is a large lump of flefh, covered with a thick bofs of long wool and curly hair, of a dark brown colour. They do not rife from the ground as our cattle, but fpring up at once upon their feet; are of a broad make, and clumfy appearance, with fhort legs, but run faft, and turn not afide for any thing when chafed, except a flanding tree. They weigh from five to ten hundred weight, are excellent meat, fupplying the inhabitants in many parts with beef, and

* Bifer.

their

(299)

their hides make good leather. I have heard a hunter affert, he faw above one thoufand buffaloes at the Blue Licks at once; fo numerous were they before the first fettlers had wantonly sported away their lives. There still remains a great number in the exterior parts of the settlement. They seed upon cane and grass, as other cattle, and are innocent harmless creatures.

There are ftill to be found many deer, elks, and bears, within the fettlement, and many more on the borders of it. There are also panthers, wild cats, and wolves.

The waters have plenty of beavers, otters, minks, and mufk-rats: nor are the animals common to other parts wanting, fuch as foxes, rabbits, fquirrels, racoons, ground-hogs, pole-cats, and opoffums. Most of the species of the domestic quadrupeds have been introduced fince the fettlement, fuch as horfes, cows, sheep and hogs, which are prodigiously multiplied, fuffered to run in the woods without a keeper, and only brought home when wanted.

American Journeys-www.americanjourneys.org

INHA-

(300)

1 N H A B I T A N T S.

AN accurate account is kept of all the male inhabitants above the age of fixteen, who are rated towards the expences of the government by the name of tithables; from which, by allowing that those fo enrolled amount to a fourth part of the whole inhabitants, we may conclude that Kentucky contains, at prefent, upwards of thirty thousfand fouls*: fo amazingly rapid has been the fettlement in a few years. Numbers are daily arriving, and multitudes expected this Fall; which gives a well grounded expectation that the country will be exceedingly populous in a fhort time. The inhabitants, at prefent, have not extraordinary good houses, as usual in a newly fettled country.

They are, in general, polite, humane, hofpitable, and very complaifant. Being collected from different parts of the continent, they have a

* This effimate, the reader will recollect, was made in 1784.

diverfity

(301)

diverfity of manners, cuftoms, and religions, which may in time perhaps be modified to one uniform. As yet united to the State of Virginia, they are governed by her wholefome laws, which are virtuoufly executed, and with excellent decorum. Schools for education are formed, and a college is appointed by act of Affembly of Virginia, to be founded under the conduct of truftees in Kentucky, and endowed with lands for its ufe. An excellent library is likewife beftowed upon this feminary, by the Rev. John Todd, of Virginia.

The Anabaptifts were the firft that promoted public worthip in Kentucky; and the Prefbyterians have formed three large congregations near Harrod's flation, and have engaged the Rev. David Rice, of Virginia, to be their paftor. At Lexington, 35 miles from thefe, they have formed another large congregation, and invited the Rev. Mr. Rankin, of Virginia, to undertake that charge among them. At prefent there are no other religious focieties formed, although feveral other fects have numerous adherents. But from thefe early movements it is hoped that Kentucky will

(302)

will eminently fhine in learning and piety, which will fulfil the wifh of every virtuous citizen.

CURIOSITIES.

AMONGST the natural curiofities of this country, the winding banks, or rather precipices of Kentucky, and Dick's Rivers, deferve the first place. The aftonished eye there beholds almost every where three or four hundred reet of a folid perpendicular lime-ftone rock; in fome parts a fine white marble, either curioufly arched, pillared, or blocked up into fine building ftones, These precipices, as was observed before, are like the fides of a deep trench, or canal; the land above being level, except where creeks fet in, and crowned with fine groves of red cedar. It is only at particular places that this river can be croffed, one of which is worthy of admiration; a great road large enough for waggons made by the buffalo, floping with an eafy defcent from the top to the bottom of a very large steep hill, at or near the river above Lees-Town.

American Journeys-www.americanjourneys.org

Caves

(303)

Caves are found in this country amazingly large; in fome of which you may travel feveral miles under a fine limeftone rock, fupported by curious arches and pillars: in most of them runs a ftream of water.

Near the head of Salt River a fubterranean lake or large pond has lately been difcovered. Col. Bowman fays, that he and a companion travelled in one four hours till he luckily came to the mouth again. The fame gentleman mentions another which operates like an air furnace, and contains much fulphur. An adventurer in any of thefe will have a perfect idea of primæval darknefs.

There appear to be great natural flores of fulphur and falt in this country. A fpring at Boonfburrow conftantly emits fulphureous particles, and near the fame place is a falt fpring. There is another fulphureous fpring upon Four Mile Creek, a third upon Green River, and many others in different places, abounding with that ufeful mineral.

There are three fprings or ponds of bitumen near Green River, which do not form a ftream, but
(304)

but difgorge themfelves into a common refervoir, and when ufed in lamps anfwer all the purpofes of the fineft oil.

There are different places abounding with copperas, eafily procured, and in its prefent impure ftate fufficient for the ufe of the inhabitants : and when refined, equal to any in the world.

There is an allum bank on the fouth fide of Cumberland River, fituated at the bottom of a cliff of rocks projecting over it. In its prefent ftate it has the appearance and poffeffes the virtues of that mineral, and when purified is a beautiful allum.

Many fine falt fprings conftantly emit water, which, being manufactured, affords great quantities of fine falt. At prefent there is but one, called Bullet's Lick, improved, and this affords falt fufficient for all Kentucky, and exports fome to the Illinois. Drinnons-lick, the Bigbone, and the Blue-licks, fend forth ftreams of falt water. The Nob-lick, and many others, do not produce water, but confift of clay mixed with falt particles: To thefe the cattle repair, and reduce high hills rather to valleys than plains. The amazing

(305)

amazing herds of Buffalo which refort thither, by their fize and number, fill the traveller with amazement and terror, especially when he beholds the prodigious roads they have made from all quarters, as if leading to fome populous city; the vast space of land around these springs defolated as if by a ravaging enemy, and hills reduced to plains; for the land near those springs are chiefly hilly. These are truly curiosities, and the eye can scarcely be fatisfied with admiring them.

A medicinal fpring is found near the Greatbone Lick, which has perfectly cured the itch by once bathing; and experience in time may difcover in it other virtues. There is another of like nature near Drinnon's Lick.

Near Lexington are to be feen curious fepulchres, full of human fkeletons, which are thus fabricated. First on the ground are laid large broad stones; on these were placed the bodies, feparated from each other by broad stones, covered with others, which serve as a basis for the next arrangement of bodies. In this order they are built, without mortar, growing still narrower

to

Х

(306)

to the height of a man. This method of burring appears to be totally different from that now practifed by the Indians At a falt fpring near Ohio river, very large bones are found, far furpaffing the fize of any fpecies of animals now in America. The head appears to have been about three feet long, the ribs feven, and the thigh bones about four; one of which is reposited in t he library in Philadelphia, and faid to weigh fe venty-eight pounds. The tufks are above a foot in length, the grinders about five inches fquare, and eight inches long. These bones have equally excited the amazement of the ignorant, and attracted the attention of the philosopher. Spc ximens of them have been fent both to France and England, where they have been examined wit h the greatest diligence, and found upon compari ifon to be remains of the fame species of animals that produced those other foffil bones which been discovered in Tartary, Chili, and have other places, both of the old and new confeveral What animal this is, and by what means tinent. are found in regions fo widely different, its ruins and when se none fuch exifts at prefent, is a queftion

(307)

tion of more difficult decision. The ignorant and superstitious Tartars attribute them to a creature, whom they call Maimon, who, they fay, ufually refides at the bottom of the rivers. and of whom they relate many marvellous flories: but as this is an affertion totally divefted of proof, and even of probability, it has justly been rejected by the learned; and on the other hand it is certain, that no fuch amphibious quadruped exifts in our American waters. The bones themfelves bear a great refemblance to those of the elephant. There is no other terrestrial animal now known large enough to produce them. The tufks with which they are equally furnished, equally produce true ivory. These external refemblances have generally made fuperficial obfervers conclude, that they could belong to no other than that prince of quadrupeds; and when they first drew the attention of the world, philofophers feem to have fubscribed to the fame opinion.-But if fo, whence is it that the whole fpecies has difappeared from America? An animal fo laborious and fo docile, that the industry of the Peruvians, which reduced to fervitude and.

X 2

(308)

and fubjected to education species so vaftly inferior in those qualities, as the Llama and the Paca, could never have overlooked the elephant, if he had been to be found in their country. Whence is it that these bones are found in climates where the elephant, a native of the torrid zone, cannot even subfift in his wild state, and in a state of servitude will not propagate? These are difficulties fufficient to ftagger credulity itfelf; and at length produced the enquiries of Dr. Hunter. That celebrated anatomift, having procured specimens from the Ohio, examined them with that accuracy for which he is fo much dif-He discovered a confiderable diftinguished. ference between the shape and structure of the bones, and those of the elephant. He observed from the form of the teeth, that they must have belonged to a carnivorous animal; whereas the habits of the elephant are foreign to fuch fuftenance, and his jaws totally unprovided with the teeth neceffary for its use: and from the whole he concluded, to the fatisfaction of naturalists, that these bones belonged to a quadruped now unknown, and whofe race is probably extinct, unlefs

3

(309)

unless it may be found in the extensive continent of New Holland, whole receffes have not yet been pervaded by the curiofity or avidity of civilized man. Can then fo great a link have perished from the chain of nature? Happy we that it has. How formidable an enemy to the human species, an animal as large as the elephant, the tyrant of the forests, perhaps the devourer of man! Nations, fuch as the Indians, must have been in perpetual alarm. The animofities among the various tribes muft have been fulpended till the common enemy, who threatened the very existence of all, should be extirpated. To this circumstance we are probably indebted for a fact, which is perhaps fingular in its kind, the extinction of a whole race of animals from the fystem of nature.

RIGHTS OF LAND.

THE proprietors of the Kentucky lands obtain their patents from Virginia, and their rights are of three kinds, viz. Those which arise from X 3 military

(310)

military fervice, from fettlement and pre-emption, or from warrants from the treasury. The military rights are held by officers, or their reprefentatives, as a reward for fervices done in one of the two last wars. The fettlement and preemption rights arife from occupation. Every man who, before March 1780, had remained in the country one year, or raifed a crop of corn, was allowed to have a fettlement of four hundred acres, and a pre-emption adjoining it of one thousand acres. Every man who had only built a cabin, or made any improvement by himfelf or others, was entitled to a pre-emption of one thousand acres where such improvement was made.

In March 1780, the fettlement and pre-emption rights ceased, and treasury warrants were afterwards issued, authorizing their possessor to locate the quantity of land mentioned in them, wherever it could be found vacant in Virginia.

The mode of procedure in these affairs may be instructive to the reader. After the entry is made in the land-office, there being one in each coun-

ty,

(311)

ty, the perfon making the entry takes out a copy of the location, and proceeds to furvey when he pleafes. The plot and certificate of fuch furvey must be returned to the office within three. months after the furvey is made, there to be recorded; and a copy of the record muft be taken out in twelve months, after the return of the furvey, and produced to the affiftant register of the land office in Kentucky, where it must lie fix months, that prior locators may have time and opportunity to enter a caveat, and prove their better right. If no caveat is entered in that time, the plot and certificate are fent to the land office at Richmond, in Virginia, and three months more are allowed to have the patent returned to the owner.

The validity of the right of Virginia to this extensive weftern territory has been difputed by fome, but without reason. The weftern boundary of that flate, by charter, restricted by the treaty of Paris, in 1763, is fixed upon the Ohio River. She has purchased the foil from the Indians, has first settled it, and established wholesome laws for the regulation and government of the

inhabit-

X 4

(312)

inhabitants; and therefore we conclude, that the right of Virginia to Kentucky is as permanent as the independence of America.

TRADE OF KENTUCKY.

A CONVENIENT fituation for commerce is the grand hinge upon which the population, riches, and happiness of every country greatly depend. I believe many conceive the fituation of Kentucky to be unfavourable in this refpect. I confess when I first visited this country I was of the opinion of other mifinformed men, that the best channel was from Philadelphia or Baltimore, by the way of Pittíburg, and from thence down the Ohio; and upon account of the difficulties and expences attending this route, for which there is no remedy, that goods would ever be dear. This opinion I have fince reprobated. as the effect of ignorance of the trade up the Miffiffippi from New Orleans, or Mantchac, at the river or gut Iberville.

Those who are acquainted with America know

the

(313)

the Mislifippi and Ohio Rivers to be the key to the northern parts of the fouthern continent. Thefe are the principal channels through which that extensive region, bathed by their waters, and enriched by the many streams they receive, communicate with the fea, and may truly be confidered as the great paffage made by the Hand of Nature for a variety of valuable purposes, and principally to promote the happiness and benefit of mankind; amongst which, the conveyance of the produce of that immense and fertile country lying westward of the United States is not the leaft. A fhort description of these rivers, and fome others flowing into them, are objects fubmitted to the reader's attention, in order to form a just idea of the favourable commercial circumstances of that important country.

The Ohio River begins at Pittfburg, 320 miles weft of Philadelphia, being there formed by the junction of the Alleghany and Monangehela Rivers, and, running a winding courfe of S. 60° Weft, falls into the Miffiffippi 1074 miles, by the meanders of the river, below Pittfburg. The only obstruction to navigation on this river are the Rapids,

(314)

Rapids, as defcribed before under the defcription of the Kentucky rivers; but they are paffed in fafety when the ftream is high.

The most remarkable branches composing the head waters of Ohio are Red-stone Creek, Cheat These waters are navi-River, and Yohogania. gable to a confiderable diftance above Pittsburg, from November until June, and the Ohio a month longer; but from Great Kenhaway, which is one hundred and ninety-fix miles and a half below Pittfburg, the ftream is navigable most of the year. Down this river great quantities of goods are brought, and fome are conveyed up the Kentucky rivers, others on horfeback or in waggons to the fettled part, and fold on an average at one hundred pounds per cent, advance.

The current of the Ohio defcends about two miles an hour in autumn, and when the waters are high, about four miles. Those of the Kentucky rivers are much the fame, and without rapids, and are of immense value to the country, affording fish and fowl, and transportation of the produce of the country to the best market. These rivers increase the Ohio more in depth than

(315)

than breadth. At its mouth it is not more than one and a half mile in width, and enters the Miffiffippi in a S. W. direction with a flow current, and a fine channel. This great river, at the junction with the Ohio, runs in a S. E. direction, and afterwards in a S. W. having been a little before joined by a greater river called Miffouri, which runs in an eaftward direction through Louifiana, and afterwards communicates to the Miffifippi, its own muddy and majefticappearance. The depth is, in common, eight or ten fathoms, until you approach its mouth, which empties itfelf by feveral channels into the Gulf of Mexico. Here the navigation is dangerous, on account of the many illands, fand-bars, and logs, interfperfed in its mouth, which is about twenty miles wide. This difadvantage may be remedied almost in the same manner that the stream was disconcerted. The conflict between the fea and this mighty river, which brings down with its fream great numbers of trees, mud, leaves, &c. caufes them to fubfide and One of thefe trees, ftopped by its form fhoals roots or branches, will foon be joined by thoufands

(316)

fands more, and fo fixed, that no human force is able to remove them. In time they are confolidated, every flood adds another layer to their height, forming illands, which at length are covered with fhrubs, grafs, and cane, and forcibly shift the bed of the river. In this manner we suppose most of the country on each fide of the Miffiffippi, below the Iberville, to have been formed, by islands uniting to islands, which in a fucceffion of time have greatly encroached on the fea, and produced an extensive tract of country. If fome of the floating timber at the mouths of this river were moved into fome of the channels, numbers more would incorporate with them; and the current being impeded in these, the whole force of the river uniting, one important channel would forcibly be opened, and fufficiently cleared to admit of the most excellent navigation.

About ninety-nine miles above Orleans is a fort, now called Mantchae by the Spaniards; formerly Forte Bute by the English, who built it. Near this is a large gut, formed by the Missifsippi, on the east fide, called Iberville; fome have

(317)

have dignified it with the name of River, when the Miffifippi, its fource, is high. This is navigable, at most, not above four months in the year for the first ten miles; for three miles further it, is from two to fix feet in autumn, and from two to four fathoms the remaining part of the way to lake Maurepas, receiving in its course the river Amit, which is navigable for batteaux to a confiderable distance.

Lake Maurepas is about ten miles in length, and feven in breadth; and there is a passage of seven miles between this and Lake Pontchartrain.

Lake Pontchartrain is about forty miles long, twenty-four broad, and eighteen feet deep. From this lake to the fea the channel is ten miles long, and three hundred yards wide; and the water deep enough to admit large vffels through thefe lakes, and their communications. This place, if attended to, might be of confequence to all the weftern country, and to the commerce of Weft-Florida: for it may reafonably be fuppofed, that the inhabitants and traders of the weftern country would rather trade at this place than

at

(318)

at New Orleans, if they could have as good returns for their peltry, and the produce of their foil, as it makes a confiderable difference in their voyage, and faves labour, money, and time. Experience will doubtlefs produce confiderable improvements, and render the navigation of the Miffiffippi, either by thefe lakes, or New Orleans, nearly as cheap as any other. That the Miffiffippi can anfwer every valuable purpofe of trade and commerce is proved already to a demonftration by experience.

I have reafon to believe that the time is not far diftant when New Orleans will be a great trading city, and perhaps another will be built near Mantchac, at Iberville, that may in time rival its glory.

A prodigious number of islands, fome of which are of great extent, are interspersed in that mighty river; and the difficulty in ascending it in the spring, when the floods are high, is compensated by eddies or counter currents, which mostly run in the bends near the banks of the river with nearly equal velocity against the stream, and affist the ascending boats. This river is rapid in those parts

(319)

parts which have clufters of iflands, fhoals, and fand banks; but the rapidity of these places will be no inconvenience to the newly invented mechanical boats*, it being their peculiar property to fail best in fmart currents.

From new Orleans to the Falls of Ohio, batteaux, carrying about 40 tons, have been rowed by eighteen or twenty men in eight or ten weeks, which, at the extent, will not amount to more than five hundred pounds expence, which experience has proved to be about one-third of that from Philadelphia. It is highly probable that in time the diffance will be exceedingly faortened by cutting acrofs bends of the river.

Charlevoix relates, that at Coupee or Cut-point, the river formerly made a great turn, and fome Canadians, by deepening the channel of a fmall

* This plan is now in agitation in Virginia, and recommended to government by two gentlemen of first rate abilities. Mr. Charles Rumfey and Dr. James M Macken. Their propofals are, " to construct a species of boat, of the burthen of ten tons, that shall fail, or be propelled by the force of mechanical powers thereto applied, up the fiream of a fresh water tiver the distance of between 25 and 40 miles a day, notwithstanding the velocity of the water should move at the rate of ten miles an hour, to be wrought at no greater expense than that of three hands."

brook,

(320)

brook, diverted the waters of the river into it. The impetuofity of the ftream was fo violent, and the foil of fo rich and loofe a quality, that in a fhort time the point was entirely cut through, and the old channel left dry, except in inundations, by which travellers fave 14 leagues of their voyage. The new channel has been founded with a line of thirty fathoms without finding bottom. When the diffance is fhortened, which I believe may readily be done, and the mechanical boats brought to their higheft improvement, the expences of a voyage from New Orleans to the Falls of Ohio will be attended with inconfiderable expence. Now we know by experience that forty tons of goods cannot be taken to the Falls of Ohio from Philadelphia under fixteen hundred pounds expence; but by improvements on the Miffifippi, with the conveniences of these boats, goods can be brought from New Orleans to the Falls for the tenth part of that expence; and if they are fold at one hundred pounds per cent. now, when brought from Philadelphia at expences fo great, what may the merchant afford to fell his goods at, who brings them fo much cheaper?

(321)

cheaper? Befides, the great advantages arifing from the exporting of peltry, and country produce, which never can be conveyed to the eaftern ports to any advantage. It is evident alfo that the market from which they receive imports, must confequently receive their exports, which is the only return they can possibly make.

By flating the commerce of Kentucky in its proper terms, we find the expences fuch, that we conclude with propriety, that that country will be fupplied with goods as cheap as if fituated but forty miles from Philadelphia.

But perhaps it will be replied, New Orleans is in the poffeifion of the Spaniards, who whenever they pleafe, may make use of that fort, and some others they have on the Missifissippi, to prevent the navigation, and ruin the trade. The passage through Iberville is also subject to the Spaniards, and, besides, inconvenient; that stream continuing fo short a time, and in the most disadvantageous feason.

I grant it will be abfurd to expect a free navigation of the Miffiffippi whilft the Spaniards are in poffeffion of New Orleans. To fuppofe it, is Y an

er into it. olent, and that in a through, 1 inundas of their founded finding l, which pechanivement. leans to i incon-)erience to the fixteen 'ements of these **D**rleans pence ; ids pr->"

(322)

an idea calculated to impose only upon the weak. They may perhaps trade with us upon their own terms, while they think it confiftent with their intereft*, but no friendship in trade exists when intereft expires; therefore, when the western country becomes populous and ripe for trade, found policy tells us the Floridas must be ours too. According to the articles of the Definitive Treaty, we are to have a free and unmolefted navigation of the Miffiffippi; but experience teaches mankind that treaties are not always to be depended upon, the most folemn being broken. Hence we learn that no one should put much faith in any flate; and the trade and commerce of the Miffiffippi River cannot be fo well fecured in any other poffession as our own.

Although the Iberville only admits of a fhort and inconvenient navigation, yet if a commercial town were built there, it would be the center of the weftern trade; and a land carriage of ten or twelve miles would be counted no difadvantage

to

[•] Article 8th of the late Definitive Treaty, fays, The navigation of the Miffifippi River from its fource to the ocean, shall for ever remain free and open to the subjects of Great-Britain and the citizens of the United States.

(323)

to the merchant. Nay, I doubt not, that in time a canal will be broke through the gut of Iberville, which may divert the water of Miffiffippi that way, and render it a place of the greatest confequence in America; but this important period is referved for futurity.

THE

(324)

THE

ADVENTURES

OF

COLONEL DANIEL BOON,

FORMERLY A HUNTER;

Containing a NARRATIVE of the WARS of KENTUCKY.

CURIOSITY is natural to the foul of man and interesting objects have a powerful influence on our affections. Let these influencing powers actuate, by the permiffion or difpofal of Providence, from felfish or focial views, yet in time the mysterious will of Heaven is unfolded, and we behold our conduct, from whatfoever motives excited, operating to answer the important defigns of heaven. Thus we behold Kentucky, lately an howling wildernefs, the habitation of favages and wild beafts, become a fruitful field ; this region, fo favourably diftinguished by nature, now become the habitation of civilization, at a period unparalleled in hiftory, in the midft of a raging war, and under all the difadvantages of emigration to a country fo remote from the inhabited

(325)

inhabited parts of the continent. Here, where the hand of violence fhed the blood of the innocent ; where the horrid yells of favages, and the groans of the deftreffed, founded in our ears, we now hear the praifes and adorations of our Creator ; where wretched wigwams ftood, the miferable abodes of favages, we behold the foundations of cities laid, that, in all probability, will equal the glory of the greateft upon earth. And we view Kentucky fituated on the fertile banks of the great Ohio, rifing from obfcurity to fhine with fplendor, equal to any other of the ftars of the American hemifphere.

The fettling of this region well deferves a place in hiftory. Most of the memorable events I have myself been exercised in j and, for the fatisfaction of the public, will brieffy relate the circumstances of my adventures, and scenes of life, from my first movement to this country until this day.

It was on the first of May, in the year 1769, that I refigned my domestic happiness for a time, and left my family and peaceableh abitation on the Yadkin River, in North Carolina, to wan-

Y 3

der

(326)

der through the wilderness of America, in quest of the country of Kentucky, in company with John Finley, John Stewart, Joseph Holden, James Monay, and William Cool. We proceeded fuccefsfully, and after a long and fatiguing journey through a mountainous wildernefs, in a weftward direction, on the feventh day of June following we found ourfelves on Red-River, where John Finley had formerly been trading with the Indians, and, from the top of an eminence, faw with pleafure the beautiful level of Kentucky. Here let me observe, that for fome time we had experienced the most uncomfortable weather as a prelibation of our future fufferings. At this place we encamped, and made a shelter to defend us from the inclement feafon, and began to hunt and reconnoitre the country. We found every where abundance of wild beafts of all forts, through this vaft foreft. The buffalo were more frequent than I have feen cattle in the fettlements, browzing on the leaves of the cane, or cropping the herbage on those extensive plains, fearles, because ignorant, of the violence of man. Sometimes we faw hundreds in a drove, and the numbers

(327)

bers about the falt fprings were amazing. In this forest, the habitation of beasts of every kind natural to America, we practifed hunting with great fuccefs, until the twenty-fecond day of December following.

This day John Stewart and I had a pleafing ramble, but fortune changed the fcene in the close of it. We had paffed through a great foreft, on which flood myriads of trees, fome gay with bloffoms, others rich with fruits. Nature was here a feries of wonders, and a fund of delight. Here the difplayed her ingenuity and induftry in a variety of flowers and fruits, beautifully coloured, elegantly fhaped, and charmingly flavoured; and we were diverted with innumerable animals prefenting themfelves perpetually to our view.-In the decline of the day, near Kentucky river, as we alcended the brow of a fmall hill, a number of Indians rushed out of a thick cane-brake upon us, and made us prifoners. The time of our forrow was now arrived, and the scene fully opened. The Indians plundered us of what we had, and kept us in confinement feven days, treating us with common favage ufage. During this time we difcovered no uneafinefs or defire

Y 4

(328)

defire to efcape, which made them lefs fufpicious of us; but in the dead of night, as we lay in a thick cane-brake by a large fire, when fleep had locked up their fenfes, my fituation not difpofing me for reft, I touched my companion, and gently awoke him. We improved this favourable opportunity, and departed, leaving them to take their reft, and speedily directed our course towards our old camp, but found it plundered, and the company difperfed and gone home. About this time my brother, Squire Boon, with another adventurer, who came to explore the country thortly after us, was wandering through the foreft, determined to find me if poffible, and accidentally found our camp. Notwithstanding the unfortunate circumstances of our company, and our dangerous fituation, as furrounded with hoftile favages, our meeting fo fortunately in the wildernefs made us reciprocally fenfible of the utmost fatisfaction. So much does friendship triumph over misfortune, that forrows and fufferings vanish at the meeting not only of real friends, but of the most distant acquaintances, and substitute happiness in their room.

Soon

(329)

Soon after this, my companion in captivity, John Stewart, was killed by the favages, and the man that came with my brother returned home by himfelf. We were then in a dangerous, helplefs fituation, exposed daily to perils and death amongst favages and wild beasts, not a white man in the country but ourfelves.

Thus fituated, many hundred miles from our families in the howling wildernefs, I believe few would have equally enjoyed the happinefs we experienced. I often obferved to my brother, You fee now how little nature requires to be fatisfied. Felicity, the companion of content, is rather found in our own breafts than in the enjoyment of external things: and I firmly believe it requires but a little philofophy to make a man happy in whatfoever ftate he is. This confifts in a full refignation to the will of Providence; and a refigned foul finds pleafure in a path ftrewed with briars and thorns.

We continued not in a state of indolence, but hunted every day, and prepared a little cottage to defend us from the winter storms. We remained there undisturbed during the winter; and

(330)

and on the first day of May, 1770, my brother returned home to the fettlement by himfelf, for a new recruit of horses and ammunition, leaving me by myself, without bread, falt or fugar, without company of my fellow creatures, or even a horse or dog. I confess I never before was under greater necessity of exercising philosophy and fortitude. A few days I passed uncomfortably. The idea of a beloved wife and family, and their anxiety upon the account of my absence and exposed fituation, made fensible impressions on my heart. A thousand dreadful apprehensions presented themselves to my view, and had undoubtedly disposed me to melancholy, if further indulged.

One day I undertook a tour through the country, and the diverfity and beauties of nature I met with in this charming feafon, expelled every gloomy and vexatious thought. Juft at the clofe of day the gentle gales retired, and left the place to the difpofal of a profound calm. Not a breeze fhook the most tremulous leaf. I had gained the fummit of a commanding ridge, and, looking round with aftonishing delight, beheld the ample plains, the beauteous tracts below. On the other hand,

(331)

hand, I furveyed the famous river Ohio that rolled in filent dignity, marking the western boundary of Kentucky with inconceivable grandeur. Ata vast distance I beheld the mountains lift their venerable brows, and penetrate the clouds. All things were still. I kindled a fire near a fountain of fweet water, and feasted on the loin of a buck, which a few hours before I had killed. The fullen shades of night foon overspread the whole hemisphere, and the earth seemed to gasp after the hovering moifture. My roving excurfion this day had fatigued my body, and diverted my imagination. I laid me down to fleep, and I awoke not until the fun had chafed away the night. I continued this tour, and in a few days explored a confiderable part of the country, each day equally pleafed as the first. I returned again to my old camp, which was not diffurbed in my absence. I did not confine my lodging to it, but often repoled in thick cane-brakes, to avoid the favages, who, I believe, often vifited my camp, but fortunately for me, in my absence. In this fituation I was confrantly exposed to danger and death. How unhappy fuch a fituation for a man tormented with fear, which is vain if no danger comes,

(332)

comes, and if it does, only augments the pain. It was my happinels to be defitute of this afflicting paffion, with which I had the greateft reafon to be affected. The prowling wolves diverted my nocturnal hours with perpetual howlings; and the various species of animals in this vast forest, in the day time, were continually in my view.

Thus I was furrounded with plenty in the midft of want. I was happy in the midft of dangers and inconveniences. In fuch a diverfity it was impossible I should be disposed to melancholy. No populous city, with all the varieties of commerce and stately structures, could afford for much pleasure to my mind, as the beauties of nature I found here.

Thus, through an uninterrupted scene of fylvan pleasures, I spent the time until the 27th day of July following, when my brother, to my great felicity, met me, according to appointment, at our old camp. Shortly after, we left this place, not thinking it fase to stay there longer, and proceeded to Cumberland River, reconnoitring that part of the country until March, 1771, and giving names to the different waters.

Soon

(333)

Soon after, I returned home to my family, with a determination to bring them as foon as possible to live in Kentucky, which I esteemed a fecond paradife, at the risk of my life and fortune.

I returned fafe to my old habitation, and found my family in happy circumstances. I fold my farm on the Yadkin, and what goods we could not carry with us; and on the twenty-fifth day of September, 1773, bade a farewell to our friends, and proceeded on our journey to Kentucky, in company with five families more, and forty men that joined us in Powel's Valley, which is one hundred and fifty miles from the now fettled parts or Kentucky. This promifing beginning was foon overcast with a cloud of adversity; for upon the tenth day of October, the rear of our company was attacked by a number of Indians, who killed fix, and wounded one man. Of these my eldeft fon was one that fell in the action. Though we defended ourfelves, and repulfed the enemy, yet this unhappy affair fcattered our cattle, brought us into extreme difficulty, and fo difcouraged the whole company, that we retreated

(334)

ed forty miles, to the fettlement on Clinch river. We had paffed over two mountains, viz. Powel's and Walden's, and were approaching Cumberland mountain when this adverse fortune overtook us. These mountains are in the wilderness. as we pass from the old settlements in Virginia to Kentucky, are ranged in a S. W. and N. E. direction, are of a great length and breadth, and not far distant from each other. Over these, nature hath formed paffes that are lefs difficult than might be expected from a view of fuch huge piles. The afpect of these cliffs is fo wild and horrid, that it is impossible to behold them without terror. The spectator is apt to imagine that nature had formerly fuffered fome violent convultion; and that thefe are the difmembered remains of the dreadful flock; the ruins, not of Persepolis or Palmyra, but of the world !

I remained with my family on Clinch until the fixth of June, 1774, when I and one Michael Stoner were folicited by Governor Dunmore of Virginia, to go to the Falls of the Ohio, to conduct into the fettlement a number of furveyors that had been fent thither by him fome months before ;

(535)

before; this country having about this time drawn the attention of many adventurers. We immediately complied with the Governor's requeft, and conducted in the furveyors, compleating a tour of eight hundred miles, through many difficulties, in fixty-two days.

Soon after I returned home, I was ordered to take the command of three garrifons during the campaign, which Governor Dunmore carried on against the Shawanese Indians : after the conclufion of which, the militia was difcharged from each garrifon, and I being relieved from my post, was folicited by a number of North-Carolina gentlemen, that were about purchasing the lands laying on the S. fide of Kentucky River, from the Cherokee Indians, to attend their treaty at Wataga, in March 1775, to negociate with them, and mention the boundaries of the purchafe. This I accepted; and at the request of the fame gentlemen, undertook to mark out a road in the best passage from the fettlement through the wildernefs to Kentucky, with fuch affiftance as I thought neceffary to employ for fuch an important undertaking.

I foon

(336)

I foon began this work, having collected a number of enterprifing men, well armed. We proceeded with all poffible expedition until we came within fifteen miles of where Boonfborough now ftands, and where we were fired upon by a party of Indians that killed two, and wounded two of our number; yet, although furprifed and taken at a difadvantage, we stood our ground. This was on the twentieth of March, 1775. Three days after, we were fired upon again, and had two men killed, and three wounded. Afterwards we proceeded on to Kentucky River without opposition; and on the first day of April began to erect the fort of Boonfborough at a falt lick, about fixty yards from the river, on the S. fide.

On the fourth day, the Indians killed one of our men.—We were bufily employed in building this fort, until the fourteenth day of June following, without any farther opposition from the Indians; and having finished the works, I returned to my family, on Clinch.

In a fhort time, I proceeded to remove my family from Clinch to this garrifon: where we arrived

(337)

arrived fafe without any other difficulties than fuch as are common to this paffage, my wife and daughter being the first white women that ever stood on the banks of Kentucky River.

On the twenty-fourth day of December following, we had one man killed, and one wounded, by the Indians, who feemed determined to perfecute us for erecting this fortification.

On the fourteenth day of July 1776, two of Col. Calaway's daughters, and one of mine, were taken prisoners near the fort. I immediately purfued the Indians, with only eight men, and on the fixteenth overtook them, killed two of the party, and recovered the girls. The fame day on which this attempt was made, the Indians divided themfelves into different parties, and attacked feveral forts, which were fhortly before this time erected, doing a great deal of mifchief. This was extremely diffreffing to the new fettlers. The innocent hufbandman was fhot down, while bufy in cultivating the foil for his family's fupply. Most of the cattle around the stations were deftroyed. They continued their hoftilities in this Z manner

(338)

manner until the fifteenth of April 1777, when they attacked Boonfborough with a party of above one hundred in number, killed one man, and wounded four.—Their loss in this attack was not certainly known to us.

On the fourth day of July following, a party of about two hundred Indians attacked Boonfborough, killed one man, and wounded two. They belieged us forty-eight hours; during which time feven of them were killed, and, at laft, finding themfelves not likely to prevail, they raifed the fiege, and departed.

The Indians had difpoled their warriors in different parties at this time, and attacked the different garrifons to prevent their affifting each other, and did much injury to the diftreffed inhabitants.

On the nineteenth day of this month, Col. Logan's fort was belieged by a party of about two hundred Indians. During this dreadful fiege they did a great deal of mifchief, diftreffed the garrifon, in which were only fifteen men, killed two, and wounded one. The enemy's lofs was uncertain,

(339)

uncertain, from the common practice which the Indians have of carrying off their dead in time of battle. Col. Harrod's fort was then defended by only fixty-five men, and Boonfborough by twenty-two, there being no more forts or white men in the country, except at the Falls, a confiderable diftance from thefe; and all taken collectively, were but a handful to the numerous warriors that were every where difperfed through the country, intent upon doing all the mifchief that favage barbarity could invent. Thus we paffed through a fcene of fufferings that exceeds defcription.

On the twenty-fifth of this month, a reinforcement of forty-five men arrived from North Carolina, and about the twentieth of August following, Col. Bowman arrived with one hundred men from Virginia. Now we began to ftrengthen, and from hence, for the fpace of fix weeks, we had fkirmishes with Indians, in one quarter or other, almost every day.

The favages now learned the fuperiority of the Long Knife, as they call the Virginians, Z 2

by
(340)

by experience; being out-generalled in almost every battle. Our affairs began to wear a new afpect, and the enemy, not daring to venture on open war, practifed fecret mischief at times.

On the first day of January 1778, I went with a party of thirty men to the Blue Licks, on Licking River, to make falt for the different garrifons in the country.

On the 7th day of February, as I was hunting to procure meat for the company, I met with a party of one hundred and two Indians, and two Frenchmen, on their march againft Boonfborough, that place being particularly the object of the enemy.

They purfued, and took me; and brought me on the eighth day to the Licks, where twentyfeven of my party were, three of them having previoufly returned home with the falt. I, knowing it was impossible for them to escape, capitulated with the enemy, and, at a distance in their view, gave notice to my men of their fituation, with orders not to refist, but furrender themfelves captives.

The

(341)

The generous usage the Indians had promifed before in my capitulation, was afterwards fully complied with, and we proceeded with them as prifoners to old Chelicothe, the principal Indian town on Little Miami, where we arrived, after an uncomfortable journey in very fevere weather, on the eighteenth day of February, and received as good treatment as prifoners could expect from favages .- On the tenth day of March following, I and ten of my men were conducted by forty Indians to Detroit, where we arrived the thirtieth day, and were treated by Governor Hamilton, the British commander at that post, with great humanity.

During our travels, the Indians entertained me well; and their affection for me was fo great, that they utterly refufed to leave me there with the others, although the Governor offered them one hundred pounds fterling for me, on purpofe to give me a parole to go home. Several Englifh gentlemen there, being fenfible of my adverfe fortune, and touched with human fympathy, generoufly offered a friendly fupply for my wants, which I refufed, with many thanks for their kind- \mathbb{Z}_3

nefs;

(342)

nefs; adding, that I never expected it would be in my power to recompenfe fuch unmerited generofity.

The Indians left my men in captivity with the British at Detroit, and on the tenth day of April brought me towards Old Chelicothe, where we arrived on the twenty-fifth day of the fame This was a long and fatiguing march, month. through an exceeding fertile country, remarkable for fine fprings and ftreams of water. At Chelicothe I fpent my time as comfortaby as I could expect; was adopted, according to their cuftom, into a family, where I became a fon, and had a great share in the affection of my new parents, brothers, fifters, and friends. I was exceedingly familiar and friendly with them, always appearing as chearful and fatisfied as poffible, and they put great confidence in me. I often went a hunting with them, and frequently gained their applause for my activity at our shooting-matches. I was careful not to exceed many of them in fhooting; for no people are more envious than they in this fport. I could observe, in their countenances and gestures, the greatest expressions of joy

(343)

joy when they exceded me; and, when the reverfe happened, of envy. The Shawanefe king took great notice of me, and treated me with profound refpect, and entire friendship, often entrusting me to hunt at my liberty. I frequently returned with the spoils of the woods, and as often prefented fome of what I had taken to him, expressive of duty to my fovereign. My food and lodging were in common with them; not fo good indeed as I could defire, but neceffity made every thing acceptable.

I now began to meditate an efcape, and carefully avoided their fufpicions, continuing with them at Old Chelicothe until the firft day of June following, and then was taken by them to the falt fprings on Sciota, and kept there, making falt, ten days. During this time I hunted fome for them, and found the land, for a great extent about this river, to exceed the foil of Kentucky, if poffible, and remarkably well watered.

When I returned to Chelicothe, alarmed to fee four hundred and fifty Indians, of their choiceft warriors, painted and armed in a fearful man-

ner,

American Journeys-www.americanjourneys.org

Z4

(344)

ner, ready to march against Boonsborough, I determined to escape the first opportunity.

On the fixteenth, before fun-rife, I departed in the moft fecret manner, and arrived at Boonfborough on the twentieth, after a journey of one hundred and fixty miles; during which, I had but one meal.

I found our fortrefs in a bad ftate of defence : but we proceeded immediately to repair our flanks, ftrengthen our gates and posterns, and form double baftions, which we completed in ten days. In this time we daily expected the arrival of the Indian army; and at length, one of my fellow prifoners, escaping from them, arrived, informing us that the enemy had, on account of my departure, postponed their expedition three weeks .- The Indians had fpies out viewing our movements, and were greatly alarmed with our increase in number and fortifications. The Grand Councils of the nations were held frequently, and with more deliberation than ufual. They evidently faw the approaching hour when the Long Knife would difpoffeis them of their defirable habitations; and, anxioufly concerned for futurity, determined

(345)

determined utterly to extirpate the whites out of Kentucky. We were not intimidated by their movements, but frequently gave them proofs of our courage.

About the first of August, I made an incurfion into the Indian country, with a party of nineteen men, in order to furprise a small town up Sciota, called Paint-Creek-Town. We advanced within four miles thereof, where we met a party of thirty Indians on their march against Boonfborough, intending to join the others from Chelicothe. A fmart fight enfued betwixt us for fome time : at length the favages gave way, and fled. We had no lofs on our fide: the enemy had one killed, and two wounded. We took from them three horfes, and all their baggage; and being informed, by two of our number that went to their town, that the Indians had entirely evacuated it, we proceeded no further, and returned with all possible expedition to affift our garrifon against the other party. We passed by them on the fixth day, and on the feventh, we arrived fafe at Boonfborough.

On the eighth, the Indian army arrived, being four

(346)

four hundred and forty-four in number, commanded by Capt. Duquefne, eleven other Frenchmen, and fome of their own chiefs, and marched up within view of our fort, with Britifh and French colours flying; and having fent a fummons to me, in his Britannick Majefty's name, to furrender the fort, I requefted two days confideration, which was granted.

It was now a critical period with us.-We were a fmall number in the garrifon :-- a powerful army before our walls, whole appearance proclaimed inevitable death, fearfully painted, and marking their footsteps with defolation. Death was preferable to captivity; and if taken by ftorm, we must inevitably be devoted to destruction. In this fituation we concluded to maintain our garrifon, if poffible. We immediately proceeded to collect what we could of our horfes, and other cattle, and bring them through the posterns into the fort: and in the evening of the ninth, I returned answer, that we were determined to defend our fort while a man was living .- 'Now,' faid I to their commander, who flood attentively hearing my fentiments, . We laugh at all your formidable

(347)

formidable preparations: but thank you for giving us notice and time to provide for our defence. Your efforts will not prevail; for our gates fhall for ever deny you admittance.'—Whether this anfwer affected their courage, or not, I cannot tell; but, contrary to our expectations, they formed a fcheme to deceive us, declaring it was their orders, from Governor Hamilton, to take us captives, and not to deftroy us; but if nine of us would come out, and treat with them, they would immediately withdraw their forces from Our walls, and return home peaceably. This founded grateful in our ears; and we agreed to the propofal.

We held the treaty within fixty yards of the garrifon, on purpole to divert them from a breach of honour, as we could not avoid fulpicions of the favages. In this fituation the articles were formally agreed to, and figned ; and the Indians told us it was cuftomary with them, on fuch occafions, for two Indians to fhake hands with every white man in the treaty, as an evidence of entire friendfhip. We agreed to this alfo, but were foon convinced their policy was to take us prifoners.—

(348)

prifoners.—They immediately grappled us; but, although furrounded by hundreds of favages, we extricated ourfelves from them, and efcaped all fafe into the garrifon, except one that was wounded, through a heavy fire from their army. They immediately attacked us on every fide, and a conftant heavy fire enfued between us, day and night, for the fpace of nine days.

In this time the enemy began to undermine our fort, which was fituated fixty yards from Kentucky River. They began at the water-mark, and proceeded in the bank fome diftance, which we underftood by their making the water muddy with the clay; and we immediately proceeded to difappoint their defign, by cutting a trench acrofs their fubterranean paffage. The enemy difcovering our counter-mine, by the clay we threw out of the fort, defifted from that ftratagem : and experience now fully convincing them that neither their power nor policy could effect their puropfe, on the twentieth day of Auguft they raifed the fiege, and departed.

During this fiege, which threatened death in every form, we had two men killed, and four wounded,

(349)

wounded, befides a number of cattle. We killed of the enemy thirty-feven, and wounded a great number. After they were gone, we picked up one hundred and twenty-five pounds weight of bullets, befides what fluck in the logs of our fort; which certainly is a great proof of their induftry. Soon after this, I went into the fettlement, and nothing worthy of a place in this account paffed in my affairs for fome time.

During my abfence from Kentucky Col. Bowman carried on an expedition against the Shawanese, at Old Chelicothe, with one hundred and fixty men, in July 1779. Here they arrived undifcovered, and a battle ensued, which lasted until ten o'clock, A. M. when Col. Bowman, finding he could not fucceed at this time, retreated about thirty miles. The Indians, in the mean time, collecting all their forces, purfued and overtook him, when a smart fight continued near two hours, not to the advantage of Col. Bowman's party.

Col. Harrod proposed to mount a number of horfe, and furiously to rush upon the favages, who at this time fought with remarkable fury. This

(350)

This defperate ftep had a happy effect, broke their line of battle, and the favages fled on all fides. In thefe two battles we had nine killed, and one wounded. The enemy's lofs uncertain, only two fcalps being taken,

On the twenty-fecond day of June 1780, a large party of Indians and Canadians, about fix hundred in number, commanded by Col. Bird, attacked Riddle's and Martin's stations, at the Forks of Licking River, with fix pieces of artillery. They carried this expedition fo fecretly, that the unwary inhabitats did not difcover them, until they fired upon the forts; and, not being prepared to oppose them, were obliged to furrender themselves miserable captives to barbarous favages, who immediately after tomahawked one man and two women, and loaded all the others with heavy baggage, forcing them along toward their towns, able or unable to march. Such as were weak and faint by the way, they tomahawked. The tender women, and helplefs children, fell victims to their cruelty. This, and the favage treatment they received afterwards, is fhocking to humanity, and too barbarous to relate.

The

(351)

The hoftile difposition of the favages, and their allies, caufed General Clark, the commandant at the Falls of the Ohio, immediately to begin an expedition with his own regiment, and the armed force of the country, against Pecaway, the principal town of the Shawanese, on a branch of Great Miami, which he finished with great fuccess, took feventeen scalps, and burnt the town to ashes, with the loss of seventeen men.

About this time I returned to Kentucky with my family; and here, to avoid an enquiry into my conduct, the reader being before informed of my bringing my family to Kentucky, I am under the neceffity of informing him that, during my captivity with the Indians, my wife, who defpaired of ever feeing me again, expecting the Indians had put a period to my life, oppreffed with the diftreffes of the country, and bereaved of me, her only happinefs, had, before I returned, tranfported my family and goods, on horfes, through the wildernefs, amidft a multitude of dangers, to her father's houfe in North-Carolina.

Shortly after the troubles at Boonfborough, I went

(352)

went to them, and lived peaceably there until this time. The hiftory of my going home, and returning with my family, forms a feries of difficulties, an account of which would fwell a volume, and being foreign to my purpofe, I fhall purpofely omit them.

I fettled my family in Boonfborough once more; and fhortly after, on the fixth day of October 1780, I went in company with my brother to the Blue Licks; and, on our return home, we were fired upon by a party of Indians. They fhot him, and purfued me, by the fcent of their dog, three miles; but I killed the dog, and efcaped. The winter foon came on, and was very fevere, which confined the Indians to their wigwams.

The feverity of this winter caufed great difficulties in Kentucky. The enemy had deftroyed most of the corn the fummer before. This neceffary article was fcarce, and dear; and the inhabitants lived chiefly on the flesh of buffalo. The circumstances of many were very lamentable: however, being a hardy race of people, and accustomed to difficulties and neceffities, they were

(353)

were wonderfully fupported through all their fufferings, until the enfuing autumn, when we received abundance from the fertile foil.

Towards Spring, we were frequently haraffed by Indians; and, in May, 1782, a party affaulted Afhton's flation, killed one man, and took a Negro prifoner. Capt. Afhton, with twentyfive men, purfued, and overtook the favages, and a fmart fight enfued, which lafted two hours; but they being fuperior in number, obliged Captain Afhton's party to retreat, with the lofs of eight killed, and four mortally wounded; their brave commander himfelf being numbered among the dead.

The Indians continued their hoftilities; and, about the tenth of August following, two boys were taken from Major Hoy's station. This party was purfued by Capt. Holder and seventeen men, who were also defeated, with the loss of four men killed, and one wounded. Our affairs became more and more alarming. Several stations which had lately been erected in the country were continually infested with savages, stealing their horses and killing the men at every opportunity. In a A a field,

(354)

field, near Lexington, an Indian fhot a man, and running to fcalp him, was himfelf fhot from the fort, and fell dead upon his enemy.

Every day we experienced recent mischiefs. The barbarous favage nations of Shawanefe, Cherokees, Wyandots, Tawas, Delawares, and feveral others near Detroit, united in a war against us, and affembled their choicest warriors at old Chelicothe, to go on the expedition, in order to deftroy us, and entirely depopulate the country. Their favage minds were inflamed to mifchief by two adandoned men, Captains M'Kee and Girty. These led them to execute every diabolical fcheme; and, on the fifteenth day of August, commanded a party of Indians and Canadians, of about five hundred in number, against Briant's station, five miles from Lexington. Without demanding a furrender, they furioufly affaulted the garrifon, which was happily prepared to oppofe them; and, after they had expended much ammunition in vain, and killed the cattle round the fort, not being likely to make themfelves mafters of this place, they raifed the fiege, and departed in the morning of the third day after they

(355)

they came, with the lofs of about thirty killed, and the number of wounded uncertain.—Of the garrifon four were killed, and three wounded.

On the eighteenth day Col. Todd, Col. Trigg. Major Harland, and myfelf, fpeedily collected one hundred and feventy-fix men, well armed, and purfued the favages. They had marched beyond the Blue Licks to a remarkable bend of the main fork of Licking River, about fortythree miles from Lexington, where we overtook them on the nineteenth day. The favages obferving us, gave way; and we, being ignorant of their numbers, passed the river. When the enemy faw our proceedings, having greatly the advantage of us in fituation, they formed the line of battle, from one bend of Licking to the other, about a mile from the Blue Licks. An exceeding fierce battle immediately began, for about fifteen minutes, when we, being overpowered by numbers, were obliged to retreat, with the lofs of fixty-feven men, feven of whom were taken prifoners. The brave and muchlamented Colonels Todd and Trigg, Major Harland, A 2 2

(356)

Harland, and my fecond fon, were among the dead. We were informed that the Indians, numbering their dead, found they had four killed more than we; and therefore, four of the prifoners they had taken were, by general confent, ordered to be killed, in a most barbarous manner, by the young warriors, in order to train them up to crucity; and then they proceeded to their towns.

On our retreat we were met by Col. Logan, haftening to join us, with a number of well armed men. This powerful affiftance we unfortunately wanted in the battle; for notwithftanding the enemy's fuperiority of numbers, they acknowledged that, if they had received one more fire from us, they fhould undoubtedly have given way. So valiantly did our fmall party fight, that, to the memory of those who unfortunately fell in the battle, enough of honour cannot be paid. Had Col. Logan and his party been with us, it is highly probable we should have given the favages a total defeat.

I cannot reflect upon this dreadful fcene, but forrow fills my heart. A zeal for the defence of their

(357)

their country led thefe heroes to the scene of action, though with a few men to attack a powerful army of experienced warriors. When we gave way, they purfued us with the utmost eagernefs, and in every quarter fpread destruction. The river was difficult to crofs, and many were killed in the flight, fome just entering the river, fome in the water, others after croffing, in afcending the cliffs. Some escaped on horseback, a few on foot; and, being difperfed every where in a few hours, brought the melancholy news of this unfortunate battle to Lexington. Many widows were now made. The reader may guefs what forrow filled the hearts of the inhabitants, exceeding any thing that I am able to defcribe. Being reinforced, we returned to bury the dead, and found their bodies ftrewed every where, cut and mangled in a dreadful manner. This mournful fcene exhibited a horror almost unparalleled: Some torn and eaten by wild beafts; those in the river eaten by fishes; all in fuch a putrified condition, that no one could be diftinguished from another.

As foon as General Clark, then at the Falls of A a 3 the

 $\label{eq:merchange} American Journeys-www.american journeys.org$

(358)

the Ohio, who was ever our ready friend, and merits the love and gratitude of all his countrymen, understood the circumstances of this unfortunate action, he ordered an expedition, with all possible haste, to purfue the favages, which was fo expeditioufly effected, that we overtook them within two miles of their towns, and probably might have obtained a great victory, had not two of their number met us about two hundred poles before we came up. These returned quick as lightening to their camp with the alarming news of a mighty army in view. The favages fled in the utmost diforder, evacuated their towns, and reluctantly left their territory to our mercy. We immediately took poffession of Old Chelicothe, without opposition, being deferted by its inhabitants. We continued our purfuit through five towns on the Miami rivers, Old Chelicothe, Pecaway, New Chelicothe, Will's Towns, and Chelicothe, burnt them all to afhes, entirely deftroyed their corn, and other fruits, and every where fpread a fcene of defolation in the country. In this expedition we took feven prifoners and five scalps, with the loss of only

(359)

only four men, two of whom were accidentally killed by our own army.

This campaign in fome measure damped the fpirits of the Indians, and made them fensible of our superiority. Their connections were diffolved, their armies scattered, and a future invasion put entirely out of their power; yet they continued to practife mischief secretly upon the inhabitants, in the exposed parts of the country.

In October following, a party made an excurfion into that diffrict called the Crab Orchard. and one of them, being advanced fome diftance before the others, boldly entered the house of a poor defenceless family, in which was only a Negro man, a woman and her children, terrified with the apprehensions of immediate death. The favage, perceiving their defenceless fituation, without offering violence to the family, attempted to captivate the Negro, who happily proved an over-match for him, threw him on the ground, and, in the ftruggle, the mother of the children drew an axe from a corner of the cottage, and cut his head off, while her little daughter fhut the door. The favages inftantly appeared, and applied Aa4

(360)

plied their tomahawks to the door. An old rufty gun-barrel, without a lock, lay in a corner, which the mother put through a fmall crevice, and the favages, perceiving it, fled. In the mean time, the alarm fpread through the neighbourhood; the armed men collected immediately, and purfued the ravagers into the wildernefs. Thus Providence, by the means of this Negro, faved the whole of the poor family from deftruction. From that time, until the happy return of peace between the United States and Great Britain, the Indians did us no mischief. Finding the great king beyond the water difappointed in his expectations, and confcious of the importance of the Long Knife, and their own wretchednefs, fome of the nations immediately defired peace; to which, at prefent, they feem univerfally difposed, and are sending ambassadors to General Clark, at the Falls of the Ohio, with the minutes of their Councils; a specimen of which, in the minutes of the Piankashaw Council, is fubjoined.

To conclude, I can now fay that I have verified the faying of an old Indian who figned Col. Hender-

(361)

Henderfon's deed. Taking me by the hand, at the delivery thereof, Brother, fays he, we have given you a fine land, but I believe you will have much trouble in fettling it.—My footfteps have often been marked with blood, and therefore I can truly fubfcribe to its original name. Two darling fons, and a brother, have I loft by favage hands, which have alfo taken from me forty valuable horfes, and abundance of cattle. Many dark and fleeplefs nights have I been a companion for owls, feparated from the cheerful fociety of men, fcorched by the fummer's fun, and pinched by the winter's cold, an inftrument ordained to fettle the wildernefs. But now the fcene is changed : peace crowns the fylvan fhade.

What thanks, what ardent and ceafelefs thanks are due to that all-fuperintending Providence which has turned a cruel war into peace, brought order out of confusion, made the fierce favages placid, and turned away their hostile weapons from our country! May the fame Almighty Geodnefs banish the accursed monster, war, from all lands, with her hated affociates, rapine and infatiable ambition! Let peace, descending from

(362)

from her native heaven, bid her olives fpring amidst the joyful nations; and plenty, in league with commerce, scatter blessings from her copious hand !

This account of my adventures will inform the reader of the most remarkable events of this country.—I now live in peace and fafety, enjoying the fweets of liberty, and the bounties of Providence, with my once fellow-fufferers, in this delightful country, which I have feen purchafed with a vast expence of blood and treasure, delighting in the prospect of its being, in a short time, one of the most opulent and powerful states on the continent of North-America; which, with the love and gratitude of my countrymen, I esteem a fufficient reward for all my toil and dangers.

DANIEL BOON.

Fayette county, Kentucky.

PIANKA-

(353)

PIANKASHAW COUNCIL.

In a COUNCIL, held with the Piankashaw Indians, by THOMAS J. DALTON, at Post St. Vincent's, April 15, 1784.

My CHILDREN,

WHAT I have often told you, is now come topafs. This day I received news from my Great Chief, at the Falls of Ohio. Peace is made with the enemies of America. The White Flefh, the Americans, French, Spaniards, Dutch and Englifh, this day fmoke out of the peace-pipe. The tomahawk is buried, and they are now friends.

I am told the Shawanefe, Delawares, Chicafaws, Cherokees, and all other the Red Flefh, have taken the Long Knife by the hand. They have given up to them the prifoners that were in their nations.

My

(364)

My Children on Wabash,

Open your ears, and let what I tell you fink deep in your hearts. You know me. Near twenty years I have been among you. The Long Knife is my nation. I know their hearts; peace they carry in one hand, and war in the other.

I leave you to yourfelves to judge. Confider, and now accept the one, or the other. We never beg peace of our enemies. If you love your women and children, receive the belt of wampum I present you. Return me my flesh you have in your villages, and the horfes you ftole from my people at Kentucky. Your corn fields were never disturbed by the Long Knife. Your women and children lived quiet in their houfes, while your warriors were killing and robbing my people. All this you know is the truth. This is the laft time I shall speak to you. I have waited fix. moons to hear you fpeak, and to get my people from you. In ten nights I shall leave the Wabash to see my Great Chief at the Falls of Ohio, where he will be glad to hear, from your own lips, what you have to fay. Here is tobacco I give you: Smoke; and confider what I have faid .--

(365)

faid.—Then I delivered one belt of blue and white wampum; and faid, Piankashaw, speak, speak to the Americans.

Then the Piankashaw Chief answered;

My Great Father, the Long Knife,

You have been many years among us. You have fuffered by us. We ftill hope you will have pity and compaffion upon us, on our women and children; the day is clear. The fun fhines on us; and the good news of peace appears in our faces. This day, my Father, this is the day of joy to the Wabafh Indians. With one tongue we now fpeak.

We accept your peace-belt. We return God thanks, you are the man that delivered us, what we long wifhed for, peace with the White Flefh. My Father, we have many times counfelled before you knew us; and you know how fome of us fuffered before.

We received the tomahawk from the English: poverty forced us to it: we were attended by other nations: we are forry for it: we this day collect the bones of our friends that long ago were fcattered upon the earth. We bury them

in

(355)

in one grave. We thus plant the tree of peace, that God may fpread branches; fo that we can all be fecured from bad weather. They fmoke as brothers out of the peace-pipe we now prefent Here, my Father, is the pipe that gives us you. joy. Smoke out of it. Our warriors are glad you are the man we prefent it to. You fee, Father, we have buried the tomahawk: we now make a great chain of friendship never to be broken; and now, as one people, fmoke out of your pipe. My Father, we know God was angry with us for stealing your horfes, and disturbing your people. He has fent us fo much fnow and cold weather, that God himfelf killed all your horfes, with our own.

We are now a poor people. God, we hope, will help us; and our Father, the Long Knife, will have pity and compation on our women and children. Your flefh, my Father, is well that is among us; we fhall collect them all together when they come in from hunting. Don't be forry, my Father, all the prifoners taken at Kentucky are alive and well; we love them, and fo do our young women.

Some

(367)

Some of your people mend our guns, and others tell us they can make rum of the corn. Thofe are now the fame as we. In one moon after this, we will go with them to their friends at Kentucky. Some of your people will now go with Coftea, a Chief of our nation, to fee his Great Father, the Long Knife, at the Falls of Ohio.

My Father,

This being the day of joy to the Wabash Indians, we beg a little drop of your milk, to let our warriors fee it came from your own breast. We were born and raifed in the woods; we could never learn to make rum—God has made the White Flesh masters of the world; they make every thing; and we all love rum———

Then they delivered three ftrings of blue and white wampum, and the coronet of peace.

PRESENT in COUNCIL, MUSKITO, ANTIA, Capt. BEAVER, MONTOUR, Woodes & BURNING, CASTIA, BADTRIPES, GRAND COURT,

With many other Chiefs, and War Captains, and the Principal Inhabitants of the Post of St. Vincent's.

Or

(368)

OF THE INDIANS.

WE have an account of twenty-eight different nations of Indians, Eaftward of the Miffiffippi.— Their fituation is as follows.

The Cherokee Indians are neareft to Kentucky, living upon the Tenafee River, near the mouths of Clench, Holftein, Nolachucke, and French Broad Rivers, which form the Tenafee or Cherokee River, in the interior part of North Carolina, two hundred miles from Kentucky.

The Chicamawgees lives about ninety miles down the Tenafee from the Cherokees, at a place called Chicamawgee, which in our language fignifies a boiling pot, there being a whirlpool in the river dangerous for boats. The Dragomonough, a Chief of the Cherokees, with fixty more, broke off from that nation, and formed this

(369)

this tribe, which is called by the name of the Whirlpool.

The Cheegees, and Middle-Settlement Indians, are fettled about fifty and eighty miles South of the Cherokee.—Thefe four tribes fpeak one language, being defeended from the Cherokees.

The Chicafaws inhabit about one hundred miles N. W. from our fettlement at French Lick, on Cumberland River, on the heads of a river called Tombeche, which runs into Mobile Bay.

The Choctaw nation are eighty miles from the Chicafaws, down the fame river.

The Creek Indians live about one hundred and fixty miles South of the Choctaws, on the Apalache River, which runs into the Gulph of Mexico, fome little diftance Eaft of Mobile Bay.

The Uchees Indians occupy four different places of refidence, at the head of St. John's, the Fork of St. Mary's, the head of Cannuchee, and the head of St. Tillis. These rivers rise on the borders of of Georgia, and run separately into the ocean.

The Catauba Indians are fettled in North-Carolina, about two hundred miles diffant from Charles-town, in S. Carolina.

ВЬ

The

(370)

The tribes to the weftward of Ohio River are the Delawares, living upon the Mufkingum River, which runs into the Ohio one hundred and eighty-feven miles above Sciotha, on the N. W. fide.

The Mingo nation lives upon a N. W. branch of Sciotha River, as is reprefented in the map.

The Wyandotts poffefs the banks of a river called Sandufky, which heads and interlocks with Sciotha, and, running in a contrary direction nearly N. W. for a great diffance, falls into Lake Erie.

The Six Nations are fettled upon waters running into Lake Ontario, that head in the mountain, from whence the Ohio and Sufquehannah rivers rife.

The Shawanefe Indians occupy five towns on the waters of Little and Great Miami, as appears in the map.

The Gibbaways are fixed on the East fide of Detroit River, and opposite the fort of that name. This river runs out of Lake Huron into Lake Erie, is thirty-fix miles in length, and the fort stands on the West fide, half way betwixt these lakes.

The

(37I

The Hurons live fix miles from the Gibbaways, towards Lake Huron, and on the fame fide of the river.

The Tawaws are found eighteen miles up the Mawmee or Omee River, which runs into Lake Erie.

There is a fmall tribe of Tawas fettled at a place called the Rapids, fome diffance higher up the river than the former.

The Mawmee Indians live two hundred and forty miles up this river, at a place called Rofedebeau.

The Piankashaws refide about one hundred and fixty miles up Wabash River :----

The Vermilion Indians about fixty miles higher;—and the Wyahtinaws about thirty miles ftill further up the fame river.

The Wabash heads and interlocks with Mawmee, and runs a contrary direction into Ohio, three hundred and eighteen miles below the Falls.

The Long-ifle or Ifle-River Indians live on Ifle, or White River, which runs into Wabash.

Bb2

The

(372)

The Kickapoos are fixed on a branch of Mawmee River above the Long-ifle Indians.

The Ozaw Nation lives on the Ozaw River, which runs into Miffiffippi :--

And the Kakafky Nation, on the Miffiffippi, two hundred miles above the Ozaws.

The Illinois Indians inhabit upon the Illinois River, which falls into the Miffiffippi;—

And the Poutawottamies near St. Joseph's, a town on a branch of the Illinois.

The Sioux and Renards, are neighbours to the fort of Michillimackinac, on Lake Michigan.

These are the principal part of the Nations within the limits of the United States. Allowing about seven hundred to a nation or tribe, they will contain, in all, twenty thosand souls, and confequently may furnish between sour and sive thousand warriors.

The fpeculations of curious idlenefs have framed many fyftems to account for the population of this immenfe continent. There is fcarce a people in the old world which has not had its advocates; and there have not been wanting

fome

(373)

some, who, despairing too loofen, have cut the knot, by fuppoling that the power which furnished America with plants, has in the fame manner supplied it with men; or at least, that a remnant in this continent was faved from the univerfal deluge, as well as in the other. As this fubject is rather curious than ufeful, and, in its very nature, does not admit of certainty, every thing that paffed in America before the arrival of the Europeans being plunged in Cimmerian darknefs, except those little traditional records, which diffuse a glimmering light on the two empires of Mexico and Peru, for about two hundred years at most before that period, we shall only flightly touch on that fubject; chiefly for the fake of taking notice of fome modern difcoveries which feem to ftrengthen the probability of fome former theories. The great fimilarity, or rather identity, of the perfons and manners of the Americans, and those of the Tartars of the N. Eaflern parts of Afia, together with a prefumption, which has long poffeffed the learned, that Afia and America were united, or at least feparated only by a narrow fea, has inclined the Bb3 more

(374)

more reflecting part of mankind to the opinion, that the true origin of the Indians is from this The immense feas, which separate the quarter. two continents on every other fide, render it highly improbable that any colonies could ever have been fent acrofs them before the difcovery of the magnetical compass. The ingenious M. Buffon too has remarked, and the observation appears to be just, that there are no animals inhabiting in common the two continents, but fuch as can bear the colds of the North. Thus there are no elephants, no lions, no tigers, no camels in America; but bears, wolves, deer, and elks in abundance, abfolutely the fame in both hemispheres. This hypothesis, which has been gaining ground ever fince its first appearance in the world, is now reduced almost to a certainty by the late difcoveries of Capt. Cook. That illustrious, but unfortunate navigator, in his last voyage, penetrated for a confiderable diftance into the strait which divides Asia from America, which is only fix leagues wide at its mouth; and therefore eafily practicable for canoes. We may now therefore conclude, that no farther enquiry will

(375)

will ever be made into the general origin of the American tribes.

Yet after all it is far from being improbable that various nations, by fhipwreck, or otherwife, may have contributed, in fome degree, to the population of this continent. The Carthaginians, who had many fettlements on the coaft of Africa, beyond the Straits of Gibraltar, and pushed their discoveries as far as where the two continents in that quarter approach each other the nearest, may probably have been thrown by tempefts on the American coaft, and the companies of the veffels finding it impracticable to return, may have incorporated with the former inhabitants, or have formed new fettlements, which, from want of the neceffary inftruments to exercise the arts they were acquainted with, would naturally degenerate into barbarity. There are indeed fome ancient writers, who give us reafon to fuppofe, that there were colonies regularly formed by that nation in America, and that the communication, after having continued for fome time, was stopped by order of the State. But it is difficult to conceive that any people, established with all those neceffaries Bb4

.
(375)

neceffaries proper for their fituation, fhould ever degenerate, from fo high a degree of cultivation as the Carthaginians poffeffed, to a total ignorance even of the moft neceffary arts: and therefore it feems probable, that if that nation ever had fuch colonies, they muft have been cut off by the natives, and every veftige of them deflroyed.

About the ninth and tenth centuries, the Danes were the greateft navigators in the univerfe. They difcovered and fettled Iceland; and from thence, in 964, planted a colony in Greenland. The ancient Icelandic chronicles, as reported by M. Mallet, contain an account of fome Icelanders, who, in the clofe of an unfuccefsful war, fied to Greenland, and from thence Weftward, to a country covered with vines, which from thence they called Vinland.

The adventurers returned home, and conducted a colony to their new difcovery; but difturbances arifing in Denmark, all communication with Greenland, as well as Vinland, ceafed; and those countries remained unknown to the rest of the world for several ages. The remains of

(377)

of this colony are probably to be found on the coaft of Labrador, in the nation of the Efquimaux. The colour of their fkins, their hairy bodies and bufhy beards, not to mention the difference of manners, mark an origin totally diffinet from that of the other Indians.

In the year 1170, Madoc, fon of Owen Gwynnedh, Prince of Wales, diffatisfied with the fituation of affairs at home, left his country, as related by the Welth hiftorians, in queft of new fettlements, and leaving Ireland to the North, proceeded Weft till he difcovered a fertile country : where, leaving a colony, he returned, and perfuading many of his countrymen to join him, put to fea with ten fhips, and was never more heard of.

This account has at feveral times drawn the attention of the world; but as no veftiges of them had then been found, it was concluded, perhaps too rafhly, to be a fable, or at leaft, that no remains of the colony exifted. Of late years, however, the Weftern fettlers have received frequent accounts of a nation, inhabiting at a great diffance up the Miffouri, in manners and appearance

(378)

ance refembling the other Indians, but speaking Welsh, and retaining some ceremonies of the Christian worship; and at length this is univerfally believed there to be a fact.

Captain Abraham Chaplain, of Kentucky, a gentleman whole veracity may be entirely depended upon, affured the author, that in the late war, being with his company in garrifon at Kafkafky, fome Indians came there, and, fpeaking in the Welfh dialect, were perfectly underflood and converfed with by two Welfhmen in his company, and that they informed them of the fituation of their nation as mentioned above.

The author is fenfible of the ridicule which the vain and the petulant may attempt to throw on this account; but as truth only has guided his pen, he is regardless of the confequences, and flatters himfelf, that, by calling the attention of mankind once more to this fubject, he may be the means of procuring a more accurate inquiry into its truth, which, if it should even refute the flory of the Welfh, will at least perform the important fervice to the world, of promoting a more

(379)

more accurate discovery of this immense continent.

There are feveral ancient remains in Kentucky, which feem to prove, that this country was formerly inhabited by a nation farther advanced in the arts of life than the Indians. Thefe are there ufually attributed to the Welfh, who are fuppofed to have formerly inhabited here; but having been expelled by the natives, were forced to take refuge near the fources of the Miffouri.

It is well known, that no Indian nation has ever practifed the method of defending themfelves by entrenchments; and fuch a work would even be no eafy one, while thefe nations were unacquainted with the ufe of iron.

In the neighbourhood of Lexington, the remains of two ancient fortifications are to be feen, furnished with ditches and bastions. One of these contains about fix acres of land, and the other nearly three. They are now overgrown with trees, which, by the number of circles in the wood, appear to be not less than one hundred and fixty years old. Pieces of earthen vessels have also been plowed up near Lexington, a manufacture

(380)

nufacture with which the Indians were never acquainted.

The burying grounds, which were mentioned above, under the head of Curiofities, form another ftrong argument that this country was formerly inhabited by a people different from the prefent Indians. Although they do not difcover any marks of extraordinary art in the firucture, yet, as many nations are particularly tenacious of their ancient cuftoms, it may perhaps be worthy of enquiry, whether thefe repositories of the dead do not bear a confiderable refemblance to the ancient British remains. Some buildings, attributed to the Picts, are mentioned by the Scottifh antiquaries, which, if the author miftakes not, are formed nearly in the fame manner. Let it be enough for him to point out the road, and hazard fome uncertain conjectures. The day is not far diftant, when the farthest receffes of this continent will be explored, and the accounts of the Welsh established beyond the possibility of a doubt, or configned to that oblivion which has already received fo many suppositions founded on arguments as plaufible as thefe.

PERSONS

(381)

PERSONS AND HABITS.

THE Indians are not born white; and take a great deal of pains to darken their complexion, by anointing themfelves with greafe, and lying in the fun. They also paint their faces, breafts and fhoulders, of various colours, but generally red; and their features are well formed, especially those of the women. They are of a middle stature, their limbs clean and straight, and fcarcely any crooked or deformed perfon is to be found among them. In many parts of their bodies they prick in gun-powder in very pretty figures. They shave, or pluck the hair off their heads, except a patch about the crown, which is ornamented with beautiful feathers, beads, wampum, and fuch like baubles. Their ears are pared, and firetched in a thong down to their fhoulders. They are wound round with wire to expand them, and adorned with filver pendants, rings, and bells, which they likewife wear in their nofes. Some of them will have a large feather through the cartilage of the nofe; and thofe

(383)

thole who can afford it, wear a collar of wampunt, a filver breaftplate, and bracelets, on the arms and wrifts. A bit of cloth about the middle, a fairt of the English make, on which they befow innumerable broaches to adorn it, a fort of cloth boots and mockafons, which are those of a make peculiar to the Indians, ornamented with porcupine quills, with a blanket or match-coat thrown over all, compleats their drefs at home; but when they go to war, they leave their trinkets behind, and mere neceffaries ferve them. There is little difference between the drefs of the men and women, excepting that a fhort petticoat, and the hair, which is exceeding black, and long, clubbed behind, diftinguish fome of the latter. Except the head and eye-brows, they pluck the hair, with great diligence, from all parts of the body, efpecially the loofer part of the fex.

Their warlike arms are guns, bows and arrows, darts, fcalping-knives and tomahawks. This is one of their most useful pieces of field-furniture, ferving all the offices of the hatchet, pipe, and fword. They are exceeding expert in throwing it, and will kill at a confiderable distance. The world world has no better marks-men, with any weapon. They will kill birds flying, fifthes fwimming, and wild beafts running.

(383)

Ġ E N I U S.

THE Indians are not fo ignorant as fome Suppose them, but are a very understanding people, quick of apprehension, fudden in execution, fubtle in bufinefs, exquisite in invention, and industrious in action. They are of a very gentle and amiable difposition to those they think their friends, but as implacable in their enmity; their revenge being only completed in the entire destruction of their enemies. They are very hardy, bearing heat, cold, hunger and thirft, in a furprifing manner, and yet no people are more addicted to excels in eating and drinking, when it is conveniently in their power. The follies, nay milchief, they commit when inebriated, are entirely laid to the liquor; and no one will revenge any injury (murder excepted) received from one who is no more himfelf. Among the Indiaris,

(384)

Indians all men are equal, perfonal qualities being moft effeemed. No diffinction of birth, no rank, renders any man capable of doing prejudice to the rights of private perfons; and there is no preeminence from merit, which begets pride, and which makes others too fenfible of their own inferiority. Though there is perhaps lefs delicacy of fentiment in the Indians than amongft us; there is, however, abundantly more probity, with infinitely lefs ceremony, or equivocal compliments. Their public conferences fhew them to be men of genius; and they have, in a high degree, the talent of natural eloquence.

They live difperfed in fmall villages, either in the woods, or on the banks of rivers, where they have little plantations of Indian corn, and roots, not enough to fupply their families half the year, and fubfifting the remainder of it by hunting, fifting and fowling, and the fruits of the earth, which grow fpontaneoufly in great plenty.

Their huts are generally built of fmall logs, and covered with bark, each one having a chimney, and a door, on which they place a padlock.

Old

(385)

Old Chelicothe is built in form of a Kentucky ftation, that is, a parallelogram, or long fquare; and fome of their houfes are fhingled. A long Council-houfe extends the whole length of the town, where the king and chiefs of the nation frequently meet, and confult of all matters of importance, whether of a civil or military nature.

Some huts are built by fetting up a frame on forks, and placing bark againft it; others of reeds, and furrounded with clay. The fire is in the middle of the wigwam, and the fmoke paffes through a little hole. They join reeds together by cords run through them, which ferve them for tables and beds. They mostly lie upon skins of wild beasts, and fit on the ground. They have brass kettles and pots to boil their food; gourds or calabass, cut as funder, ferve them for pails, cups, and disfues.

RELIGION.

THE accounts of travellers, concerning their religion, are various; and although it cannot be C c abfolutely

(386)

abfolutely affirmed that they have none, yet it muft be confeffed very difficult to define what it is. All agree that they acknowledge one Supreme God, but do not adore him. They have not feen him, they do not know him, believing him to be too far exalted above them, and too happy in himfelf to be concerned about the triffing affairs of poor mortals. They feem alfo to believe in a future flate, and that after death they fhall be removed to their friends, who have gone before them, to an elyflum, or paradife.

The Wyandotts, near Detroit, and fome others, have the Roman Catholic religion introduced amongst them by missionaries. These have a church, a minister, and a regular burying-ground. Many of them appear zealous, and fay prayers in their families. These, by acquaintance with white people, are a little civilized, which must of necessity precede Christianity.

The Shawanefe, Cherokees, Chickafaws, and fome others, are little concerned about fuperftition, or religion. Others continue their former fuperftitious worfhip of the objects of their love and fear, and efpecially those beings whom they most

(387)

most dread, and whom therefore we generally denominate devils; though, at the fame time, it is allowed they pray to the Sun, and other inferior benevolent deities, for fuccess in their undertakings, for plenty of food, and other neceffaries in life.

They have their feftivals, and other rejoicingdays, on which they fing and dance in a ring, taking hands, having fo painted and difguifed themfelves, that it is difficult to know any of them; and after enjoying this diversion for a while, they retire to the place where they have prepared a feast of fish, flesh, fowls, and fruits; to which all are invited, and entertained with their country fongs. They believe that there is great virtue in feafts for the fick. For this purpofe a young buck must be killed, and boiled, the friends and near neighbours of the patient invited, and having first thrown tobacco on the fire, and covered it up close, they all fit down in a ring, and raife a lamentable cry. They then uncover the fire, and kindle it up; and the head of the buck is first fent about; every one taking Cc2

a bir,

(388)

a bit, and giving a loud croak, in imitation of crows. They afterwards proceed to eat all the buck, making a most harmonious, melancholy fong; in which strain their music is particularly excellent.

As they approach their towns, when fome of their people are loft in war, they make great lamentations for their dead, and bear them long after in remembrance.

Some nations abhor adultery, do not approve of a plurality of wives, and are not guilty of theft; but there are other tribes that are not fo fcrupulous in thefe matters. Amongft the Chickafaws a hufband may cut off the nofe of his wife, if guilty of adultery; but men are allowed greater liberty. This nation defpifes a thief. Among the Cherokees they cut off the nofe and ears of an adulterefs; afterwards her hufband gives her a difcharge; and from this time fhe is not permitted to refufe any one who prefents himfelf. Fornication is unnoticed; for they allow perfons in a fingle flate unbounded freedom.

Their form of marriage is short-the man, before

(389)

before witneffes, gives the bride a deer's foot, and she, in return, presents him with an ear of corn, as emblems of their several duties.

The women are very flaves to the men; which is a common cafe in rude, unpolifhed nations, throughout the world. They are charged with being revengeful; but this revenge is only doing themfelves juffice on those who injure them, and is feldom executed, but in cases of murder and adultery.

Their king has no power to put any one to death by his own authority; but the murderer is generally delivered up to the friends of the deceafed, to do as they pleafe. When one kills another, his friend kills him, and fo they continue until much blood is fhed; and at last the quarrel is ended by mutual prefents. Their kings are hereditary, but their authority extremely limited. No people are a more firiking evidence of the miferies of mankind in the want of government than they. Every chief, when offended, breaks off with a party, fettles at fome diftance, and then commences hoftilities against his own people. They are generally at war with Cc3 each

(390)

each other. These are common circumstances amongst the Indians.

When they take captives in war, they are exceedingly cruel, treating the unhappy prifoners in fuch a manner, that death would be preferable to life. They afterwards give them plenty of food, load them with burdens, and when they arrive at their towns, they must run the gauntlet. In this, the favages exercise fo much cruelty, that one would think it impossible they should furvive their fufferings. Many are killed; but if one outlives this trial, he is adopted into a family as a fon, and treated with paternal kindness; and if he avoids their fuspicions of going away, is allowed the fame privileges as their own people.

THE CONCLUSION.

HAVING finished my intended narrative, I shall close with a few observations upon the happy circumstances, that the inhabitants of Kentucky will probably enjoy, from the posfession of a country so extensive and fertile.

There

(391)

There are four natural qualities neceffary to promote the happinels of a country, viz. A good foil, air, water, and trade. Thefe taken collectively, excepting the latter, Kentucky poffeffes in a fuperior degree: and, agreeable to our defcription of the weftern trade, we conclude, that it will be nearly equal to any other on the continent of America, and the difadvantages it is fubject to, be fully compenfated by the fertility of the foil.

This fertile region, abounding with all the luxuries of nature, flored with all the principal materials for art and induftry, inhabited by virtuous and ingenious citizens, muft univerfally attract the attention of mankind, being fituated in the central part of the extensive American empire (the limits of whofe ample domains, as defcribed in the fecond article of the late definitive treaty, are fubjoined), where agriculture induftry, laws, arts and fciences, flourifh; where afflicted humanity raifes her drooping head; where fprings a harveft for the poor; where confcience ceafes to be a flave, and laws are no more than the fecurity of happines; where na-

ture

American Journeys-www.americanjourneys.org

Cc4

(392)

ture makes reparation for having created man; and government, fo long profituted to the moft criminal purpofes, eftablishes an afylum in the wilderness for the distressed of mankind.

* The recital of your happiness will call to your country all the unfortunate of the earth, who, having experienced oppreffion, political or religious, will there find a deliverance from their chains. To you innumerable multitudes will emigrate from the hateful regions of defpotifm and tyranny; and you will furely welcome them as friends, as brothers; you will welcome them to partake with you of your happinels .- Let the memory of Lycurgus, the Spartan legiflator, who banished covetousness, and the love of gold from his country; the excellent Locke, who firft taught the doctrine of toleration; the venerable Penn, the first who founded a city of brethren; and Washington, the defender and protector of perfecuted liberty, be ever the illustrious examples of your political conduct. Avail yourfelves of the benefits of nature, and of the fruitful country you inhabit.

Let the iron of your mines, the wool of your flocks.

(393)

flocks, your flax and hemp, the fkins of the favage animals that wander in your woods, be fashioned into manufactures, and take an extraordinary value from your hands. Then will you rival the superfluities of Europe, and know that happiness may be found, without the commerce fo universally defired by mankind.

In your country, like the land of promife, flowing with milk and honey, a land of brooks of water, of fountains and depths, that fpring out of valleys and hills, a land of wheat and barley, and all kinds of fruits, you fhall eat bread without fcarcenefs, and not lack any thing in it; where you are neither chilled with the cold of Capricorn, nor fcorched with the burning heat of Cancer; the mildnefs of your air fo great, that you neither feel the effects of infectious fogs, nor peftilential vapours. Thus, your country, favoured with the fmiles of heaven, will probably be inhabited by the firft people the world ever knew.

ARTICLE

(394)

ARTICLE II. of the late DEFINITIVE TREATY.

AND that all disputes which might arise in future on the fubject of the boundaries of the faid United States, may be prevented, it is hereby agreed and declared, that the following are and shall be their boundaries, viz. From the N. W. angle of Nova Scotia, viz. that angle which is formed by a line drawn due north from the fource of St. Croix River along the faid highlands, which divide those rivers that empty themselves into the river St. Lawrence, from those which fall into the Atlantic Ocean, to the north-wefternmost head of Connecticut River; thence down along the middle of that river to the forty-fifth degree of north latitude; from thence by a line due west on faid latitude, until it strikes the Iroquois, or Cataraqui; thence along the middle of the faid river into Lake Ontario, through the middle of the faid lake, until it strikes the communication by water between that lake and Lake Erie; thence along the middle of faid communication into Lake Erie; through the middle

(395)

middle of faid lake until it arrives at the water communication between that lake and Lake Huron; thence along the middle of faid water communication into the Lake Huron; thence through the middle of faid lake to the water communication between that lake and Lake Superior; thence through Lake Superior northward of the ifles Royal and Phelipeaux to the Long Lake; thence through the middle of faid Long Lake and the water communication between it and the Lake of the Woods, to the Lake of the Woods; thence through the faid lake to the most N. W. point thereof, and from thence on a due west course to the river Miffiffippi; thence by a line to be drawn along the middle of the faid river Miffiffippi until it shall intersect the northernmost part of the thirty-first degree of north latitude; fourth, by a line to be drawn due east from the determination of the last mentioned in the latitude of thirty-one degrees north of the equator, to the middle of the river Apalachicola, or Catanouche; thence along the middle thereof to its junction

(396)

junction with the Flint River; thence straight to the head of St. Mary's River; and thence down along the middle of St. Mary's River to the Atlantic Ocean; east, by a line to be drawn along the middle of the river St. Croix, from its mouth in the bay of Fundy to its fource, and from its fource directly north to the aforefaid highlands which divide the rivers that fall into the Atlantic Ocean from those which fall into the river St. Lawrence, comprehending all islands within twenty leagues of any part of the shores of the United States, and lying between lines to be drawn due east from the points where the aforefaid boundaries between Nova Scotia on the one part, and East Florida on the other, fhall refpectively touch the bay of Fundy and the Atlantic ocean, excepting fuch islands as now are, or heretofore have been, within the limits of the faid province of Nova Scotia.

POSTSCRIPT.

IN order to communicate a diffinct idea of the prefent complexion of the flate of Kentucky, I have drawn a map from the beft authorities, from which you will difcern that Kentucky is already divided into nine counties; and that villages are fpringing up in every part within its limits, while roads have been opened to florten the diffance to Virginia, and to fmooth the rugged paths, which a flort time fince were our only tracts of communication from one place to another.

You must have observed in a note I annexed to my last letter, the fecurity Kentucky enjoys from the cordon of troops extending upon the western fide of the Ohio; and you have only to contemplate the advanced fettlements on that fide of the river, I presume, to become perfectly convinced of our permanent faster from the attacks of the Indians.

Ιε

(401)

At the mouth of the Great Kanhaway, a fettlement has been formed, which, united with the fettlements on Elk River, makes it fufficiently populous to become a diffinct county of Virginia, by the name of Kanhaway: fo that if you look on either quarter of Kentucky, you will find its frontiers are guarded by fettlements nearly adult.

Galliapolis, upon the weftern fide of the Ohio, a little below the mouth of the Great Kanhaway, and extending to the Sciota River, fettled by the French, forms a barrier to the north; the forts, and the different fettlements contiguous to them, to the weft; Cumberland to the fouth; and upon our back, or eaft, you will obferve the diftance through the wildernefs, which feparates us from the back counties of Virginia, is rapidly contracting by the approximation of our fettlements with thofe of Virginia and North Carolina, and which will very foon cut off the communication between the northern and fouthern tribes of Indians.

There were two expeditions from Kentucky performed against the Indians in 1791, under

D d

the

(402)

the command of Generals Scott and Wilkinfon, that I have not hitherto noticed, and which had for their object the chaftifement of a predatory, troublefome, and warlike tribe, who lived in feveral detached towns upon the Wabafh and its waters.

The particulars of those expeditions I do not think have been generally known in Europe, and as they were undertaken when I was absent from the country, I shall subjoin an extract from a letter I received from a friend, who formed one of the party; and which, I shatter myself, will be found to contain a considerable share of information, both as to the manner and address of the Kentuckians in Indian warfare, and a more minute account of the country lying between the Ohio and the Wabash.

"General Scott, at the head of 800 Kentucky Volunteers, marched from opposite the mouth of the Kentucky River, about the beginning of June, the course he steered was about north 20° west, and in about fisteen days he struck and surprized the lower Weaucteneau towns on the Wabash River, and the pararie adjoining; but unfortunately

(403)

unfortunately the river at that time was not fordable, or the Kickapoo Town on the north-weft fide, with the Indians who efcaped in their canoes from the Weau Town on the fouth, muft have fallen completely into our hands; however, about 20 warriors were killed in the Weau villages, and in the river croffing the Wabafh, and 47 of their Squaws and children taken prifoners.

"Immediately after the engagement, a council of war was called, when it was determined, that Wilkinson should cross the Wabash under cover of the night, with a detachment of four hundred men, and endeavour to furprife the town of Kathtippacamunck, which was fituated upon the north fide of that river, at the mouth of Rippacanoe creek, and about twenty miles above the Lower Weau towns. This expedition was conducted with fo much caution and celerity, that Wilkinfon arrived at the margin of the pararie, within a mile, and to the west of the town, about an hour before the break of day; whilft a detachment was taking a circuit through the pararie to co-operate with the main body on a given fignal; day appeared, and the volunteers Dd 2 rushed

(404)

rushed into the town with an impetuolity not to be refifted. The detachment in advance reached the Rippacanoe Creek the very moment the last of the Indians were crossing, when a very brick fire took place between the detachment and the Indians on the opposite fide, in which feveral of their warriors were killed, and two of our men wounded.

"This town, which contained about 120 houfes, 80 of which were fhingle roofed, was immediately burnt and levelled with the ground; the beft houfes belonged to French traders, whofe gardens and improvements round the town were truly delightful, and, every thing confidered, not a little wonderful; there was a tavern, with cellars, bar, public, and private rooms; and the whole marked a confiderable fhare of order, and no fmall degree of civilization.

"Wilkinfon returned with his detatchment, after deftroying the town, and joined the main army about feven in the evening; and the day following our little armywere put in motion with their prifoners; and fteering about fouth, in twelve

(405)

twelve days reached the Rapids of the Ohio, with the lofs only of two men, who unfortunately were drowned in croffing Main White River.

" The fuccefs of this expedition encouraged Government to fet another on foot, under the command of General Wilkinfon; which was deftined to operate against the fame tribes of Indians; whofe main town, near the mouth of Ell River, on the Wabash, had not been attacked in the first excursion; and accordingly, on the first of August following, the general, at the head of 500 mounted volunteers, marched from Fort Washington, north 16° west, steering, as it were, for the Manmic villages on the Picaway Fork of the Manmic (or Miami of the lake) and St. Mary's River-This movement was intended as a feint, and the Indians, who afterwards fell upon our trail, were completely deceived; nor did we change our course, until by the capture of a Delaware Indian, we afcertained that we were within 30miles of the principal of the Manmic villages, and having marched down our northing, at the very time we received the information, fhifted our course to due west, and at the distance of 180 Dd3 miles

(406)

miles from Fort Walhington we firuck the Wabath within two miles and a half of Longuille, or, as the Indians call it, Kenapacomaqua—It was about 4 P. M. when we reached that river, and croffing it immediately, we marched in four columns acrofs the neck of land, formed by the junction of the Wabafh and Ell Rivers: paffing feveral Indian war pofts that had been freih painted, we arrived completely concealed on the fouth bank of Ell River, and directly opposite the town of Kenapacomaqua.

"The furprize of this town was fo very complete, that before we received orders to crofs the river and rufh upon the town, we obferved feveral children playing on the tops of the houfes, and could diffinguifh the hilarity and merriment that feemed to crown the feftivity of the villagers, for it was in the feafon of the green corn dance.

" The want of day-light, and a morafs, that nearly encircled the town, prevented us from fuddenly attacking, which enabled feveral of the Indians to efcape; and in fome meafure obfcured the brilliancy of the enterprize, by limiting the number of warriors killed to eleven, and capturing

(407)

ing forty Squaws and their children, after burning all the houfes, and deftroying about 200 acres of corn; which was then in the milk, and in that ftage when the Indians prepare it for Zoffomanony. This fuccefs was atchieved with the lofs of two men, who were killed.

" About four o'clock in the afternoon we mounted our prifoners, and took a weft and by north courfe toward the Little Kickapoo Town, which the general hoped to furprize on his way to the Great Kickapoo Town, in the pararie, on the waters of the Illinois River ; but the difficulties we encountered in this march, through thefe almost boundless pararies, were such, that upon our arrival at the Little Kickapoo Town, we found one half the horses in the army non-effective, and unlikely to reach the Ohio, by the nearest course we could take; which confideration induced the general to relinquish the enterprize against the Great Kickapoo Town; and, accordingly, after deftroying about 200 acres of corn at Kathtippacanunck, Kickapoo, and the lower Weauctenau towns, we gained General Scot's seturn tract, and on the 21st of August, after Dd4 a circu-

(408)

a circuitous march of 486 miles, arrived with our prisoners at Louisville.

" In the course of this march, I had an opportunity of obferving the general face of the country through which we paffed .- Between Fort Washington, at the crossing of the Great Miami, where at present there is a confiderable fettlement under the protection of Fort Hamilton, a fine body of land is found, but which is very indifferently watered. The fituation of Fort Hamilton is well chosen, as advantageous for defence, as pleafing to the eye; it flands on a narrow neck of land, commanding the Miami on N. W. and a pararie and fheet of water on the N. E. about a mile wide, and two miles and an half long; from this pararie an abundant supply of forage may be got for the use of the army by repeated movings of a very fine natural grafs, from the month of June till the end of September. After paffing the Miami River hills, on the west fide, the country in places is broken, though, generally speaking, from thence to the limits of our march, toward the Maninic villages the face of it is agreeably varied with hills and dales ;

dales, well watered, and the timber mostly fuch as indicates a ftrong and durable foil. Between the Manmic trace and our weft line of march toward Kenapacomaqua, there are a number of beech fwamps, which will requiredraining before they will admit of fettlements being formedthere are however delightfully pleafant and fertile fituations on the Balemut and Salamine Rivers, which are only inferior to the woody plains of Kentucky in extent and climate. The pararie, in which was fituated Kenapacomaqua, on the north bank of Ell River, is chiefly a morafs, and produces little elfe, other than hazel, fallow, a fpecies of dwarf poplar, and a very coarfe, but luxuriant grafs; the latter of which covers mostly the whole furface of the earth .- The fame kind of pararie extends, with little alteration, until you approach Kathtippacanunck, when the whole country gradually affumes a more pleafing and valuable appearance.

On our line of march from Kenapacomaqua to Kathtippacanunck (the diffance of which from the traverfes we were obliged to make to avoid impaffable moraffes, was fixty miles), in feveral places,

American Journeys-www.americanjourneys.org

(409)

(410)

places, the profpect was only bounded by the natural horizon, the uniformity of which was here and there broken by the diffant looming of a grove on the edge of the plane, which ftrongly refembled the projecting points of a coach clothed with wood, and feen by mariners at a diffance from the fhore.

" The fituation of the late town of Kathtippacanunck was well chosen for beauty and convenience; it flood in the bofom of a delightful furrounding country on a very rich bottom, extending east and west, on the Wabash River about two miles; the bottom about half a mile wide, bounded on the east by Tippacanoe, and weftward by a beautiful rifing ground, fkirted and clothed with thin woods-from the upper bank you command a view of the Wabash River, which is terminated by a towering growth of wood to the fouth, and Tippacanoe Creek to the East-the country in the rear from the upper bank spreads into a level pararie of firm, ftrong land, of an excellent quality, interfperfed with copfes, naked groves of trees, and high mounds of earth of a regular and conical form, all of which confpire

(411)

confpire to relieve the eye, and cheer the focus with a most agreeable variety. The top of this bank, which is level with the plane of the pararie, and about two hundred feet perpendicular from the bottom in which the town stood, forms an angle about 60°, and about midway there issues from its fide two living fountains, which have hitherto constantly supplied the town with water.

"The country between Kathtippacanunck and the Little Kickapoo town is beautiful beyond defcription. The numerous breaks, and intermixture of woodland and plains, give the whole an air of the most perfect taste; for nature here, in a propitious hour, and in a benignant mood, seems to have designed to prove, in beautifying, how far she excels our utmost efforts, and the most laboured improvements of art.

" Between the Little Kickapoo town and the lower Weausteneau towns, the land is of the firstrate quality—at the edge of the wood lands, and before your defcend into the river bottoms, one of the most charming prospects the imagination can form, displays itself in all the variegated pride of the

(412)

the most captivating beauty. From this place, through the glades and viftas of the groves in the bottom, you catch a view of the meandering river, which filently feals through this fmiling country, as if pregnant with its charms, and, as if it was hurrying to communicate its joys to lefs happy ftreams. The bottoms of the Wabash on the oppofite fide are confined by a bluff bank nearly two hundred feet, which interrupts the prospect, and runs parrallel with the river-from the top of this bank a plain is feen firetching out to the east and weft as far as the eye can reach, without tree or bufh, covered with a most luxuriant herbage, and in every refpect affuming the appearance of an highly improved and cultivated meadow. The plain is terminated on the fouth by a diftant prospect of the rising woodlands, which, with a mifty bloom, and in all that azure beauty, so peculiar to these fair regions, here appears in all its ætherial luftre; and feems finally loft in combining with the clouds.

" The Briares extend about twenty-five miles fouth of the Wabash, from thence the country gradually breaks into hills and valleys, and until we

(413)

we reached the waters of White River, we found the foil tolerably good. There it is very much broken, the bottoms of the rivers are narrow, and fubject to frequent and violent innundations.

" There is fome tolerable good land on Rocky River, but as we approached the waters of the Blue River, the country again opens into plains, in which are interfperfed clumps of fcrubby oak, dwarf laurel, plumb, and hazel, that extend to Indian Creek, when the country again improves, and though it is rather broken, it continued to improve until we reached the Rapids of the Ohio."

What I formerly advanced refpecting a new State being formed in ten years from that date, weft of the Ohio, merely as conjecture, does not appear to me at prefent the leaft problematical.

The circumftances attending the rife of the State of Kentucky were infinitely more perilous and calamitous than extending our fettlements farther weftward are likely to be:—and when it is remembered that State rofe, from an uninhabited wild, detached from every other country from

(414)

from which it would obtain fupplies a diffance of feveral hundred miles, and exposed on every quarter to the merciles fury of the favages, in a fhorter period of time, and that our prefent infant fettlements are protected by a firong and active military force, directed by fatal and improved experience of our former misfortunes, with a cultivated country at their back, which pours fourth an abundance of refources to fupport them against the effects of contingencies and difasters, I think we may contemplate, with every degree of human certainty, the fuccels of fuch a fpeculation.

The fettlement at the mouth of the Great Kanhaway, which did not commence until 1785, and which was an æra when our wefternaffairs had a most gloomy aspect, constitutes already, with the fettlements above the river Elk, a distinct county, and in which the laws of the State to which it belongs are administered with great precision and justice.

Galleapolis and the fettlements upon the Miami increase daily in strength, while fresh encouragement and security are given to emigrants

bγ

(415)

by the vigilance of the army in their neighbourhood; who fo completely overawe the Indians, that little harm in future can be dreaded from their incurfions, and they well know their partial fucceffes hitherto were owing to the folly of our war minifter, and the inexperience of the officers of his appointment—but the fyftem has been completely changed—and the fuccefs of Wilkinfon and Scot's expedition is amply fufficient to juftify the meafure.
